MIŠIĆI LEĐA I SLABINA

Prof. dr Ivana Nešić

MIŠIĆI TRUPA (*MUSCULI TRUNCI*)

1. MIŠIĆI VRATA (*Mm. colli*)
2. MIŠIĆI LEĐA I SLABINA (*Mm. dorsi*)
3. MIŠIĆI REPA (*Mm. caudae s. coccygis*)
4. MIŠIĆI GRUDNOG KOŠA (*Mm. thoracis*)
5. MIŠIĆI TRBUŠNOG ZIDA (*Mm. abdominis*)

MIŠIĆI LEĐA I SLABINA

M. trapezius thoracis
M. latissimus dorsi
M. rhomboideus thoracis
M. serratus ventralis thoracis

MIŠIĆI SINSARKOZNE VEZE

➤ *M. serratus dorsalis*
➤ *M. iliocostalis*
➤ *M. longissimus*
➤ *M. spinalis*
➤ *Mm. multifidi*

M. quadratus lumborum
M. psoas major
M. psoas minor

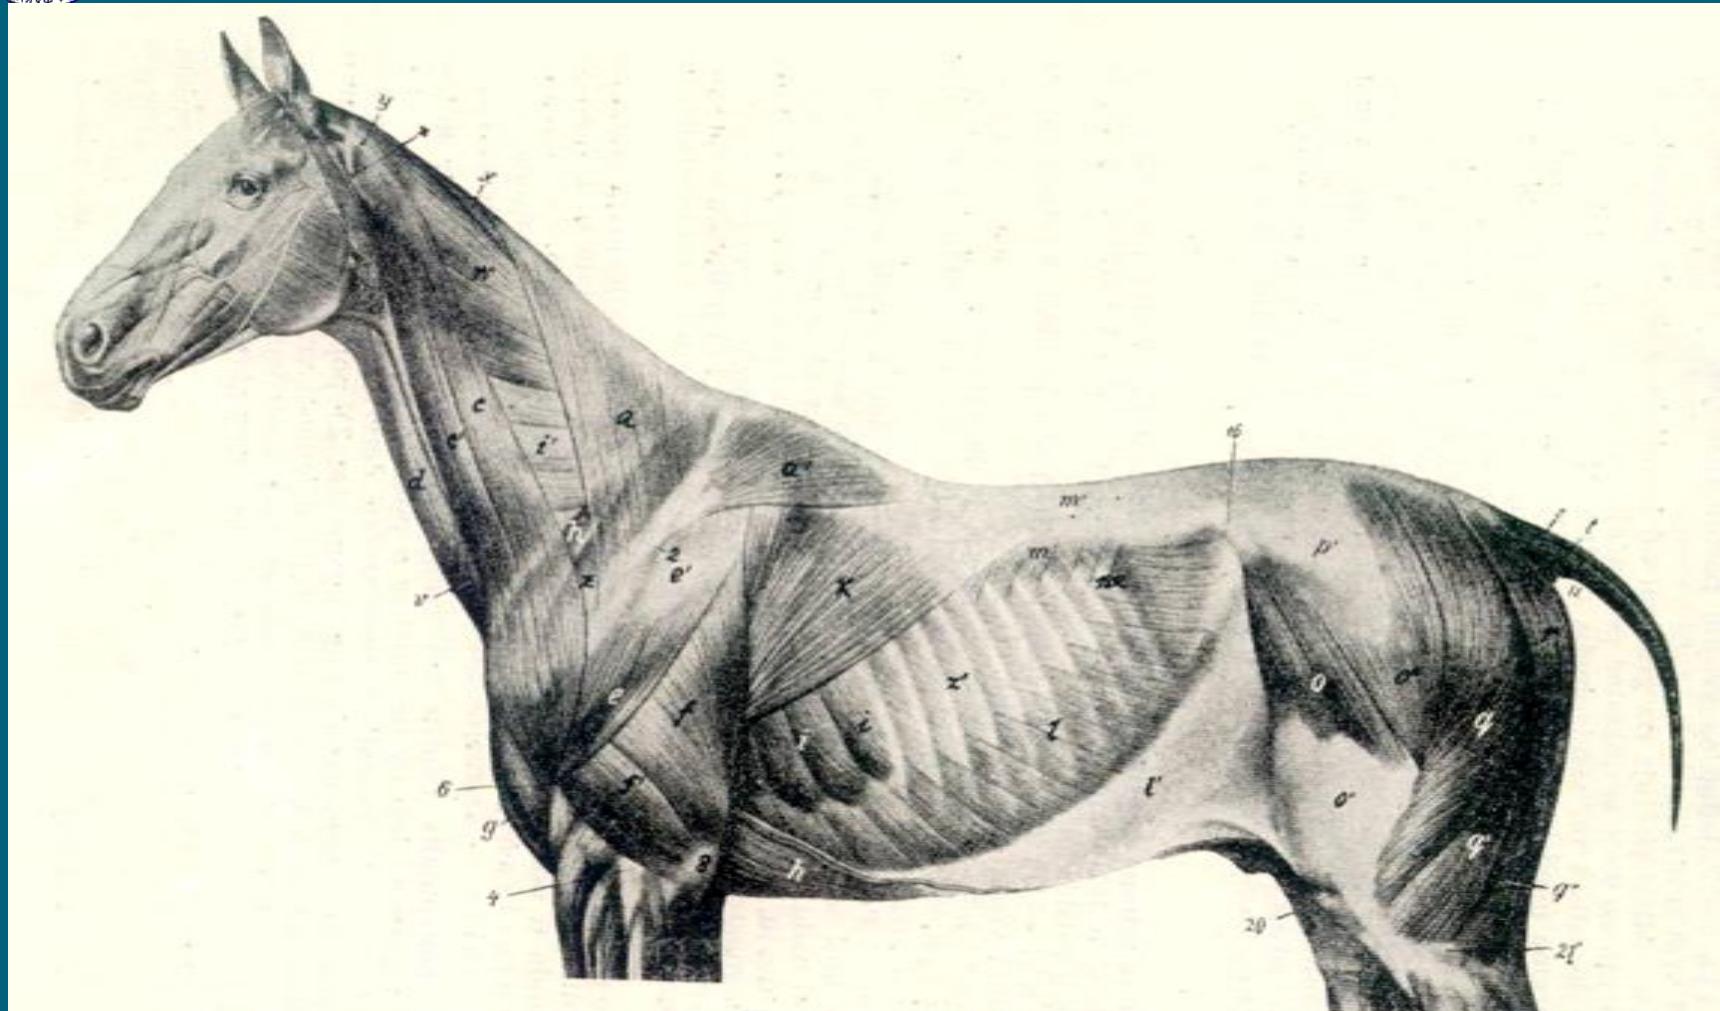

MIŠIĆI KARLIČNOG POJASA

Inervacija: spinalni nervi

M. trapezius (pars thoracica) ***M. latissimus dorsi***

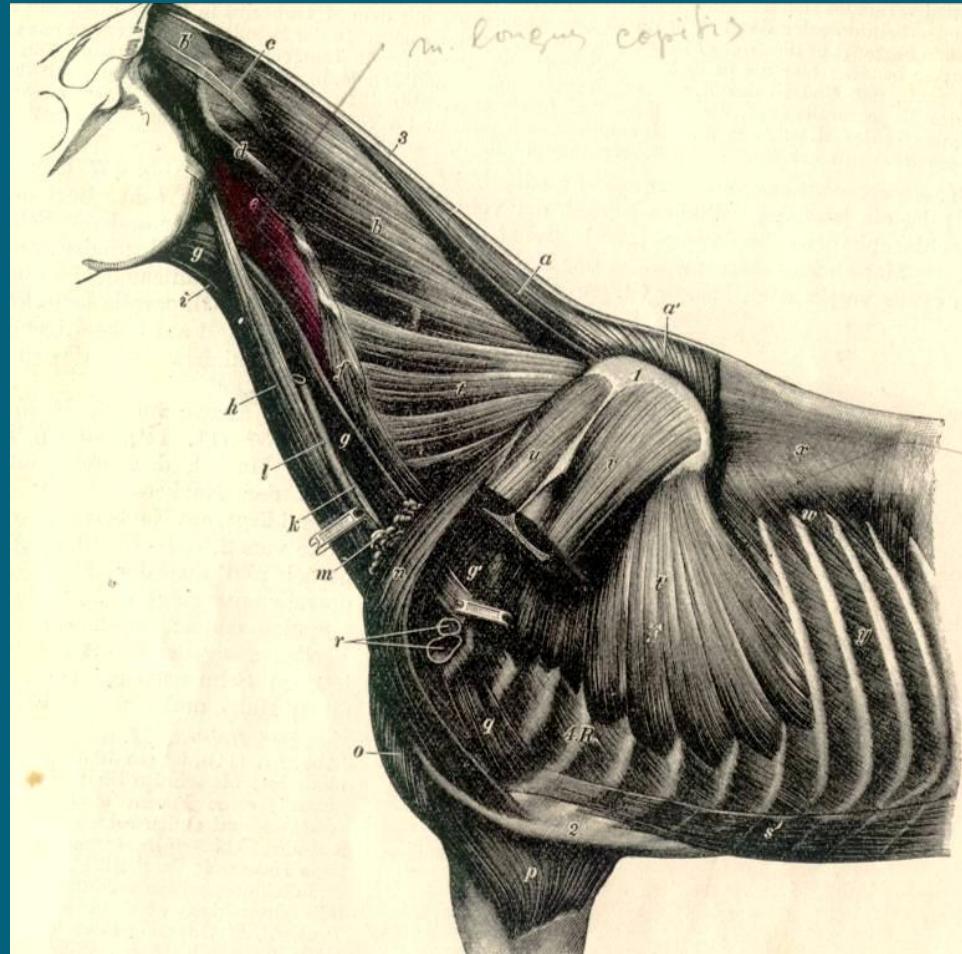

Mišići u prvom sloju posle skidanja kože i površne fascije trupa

M. rhomboideus thoracis

M. serratus ventralis thoracis

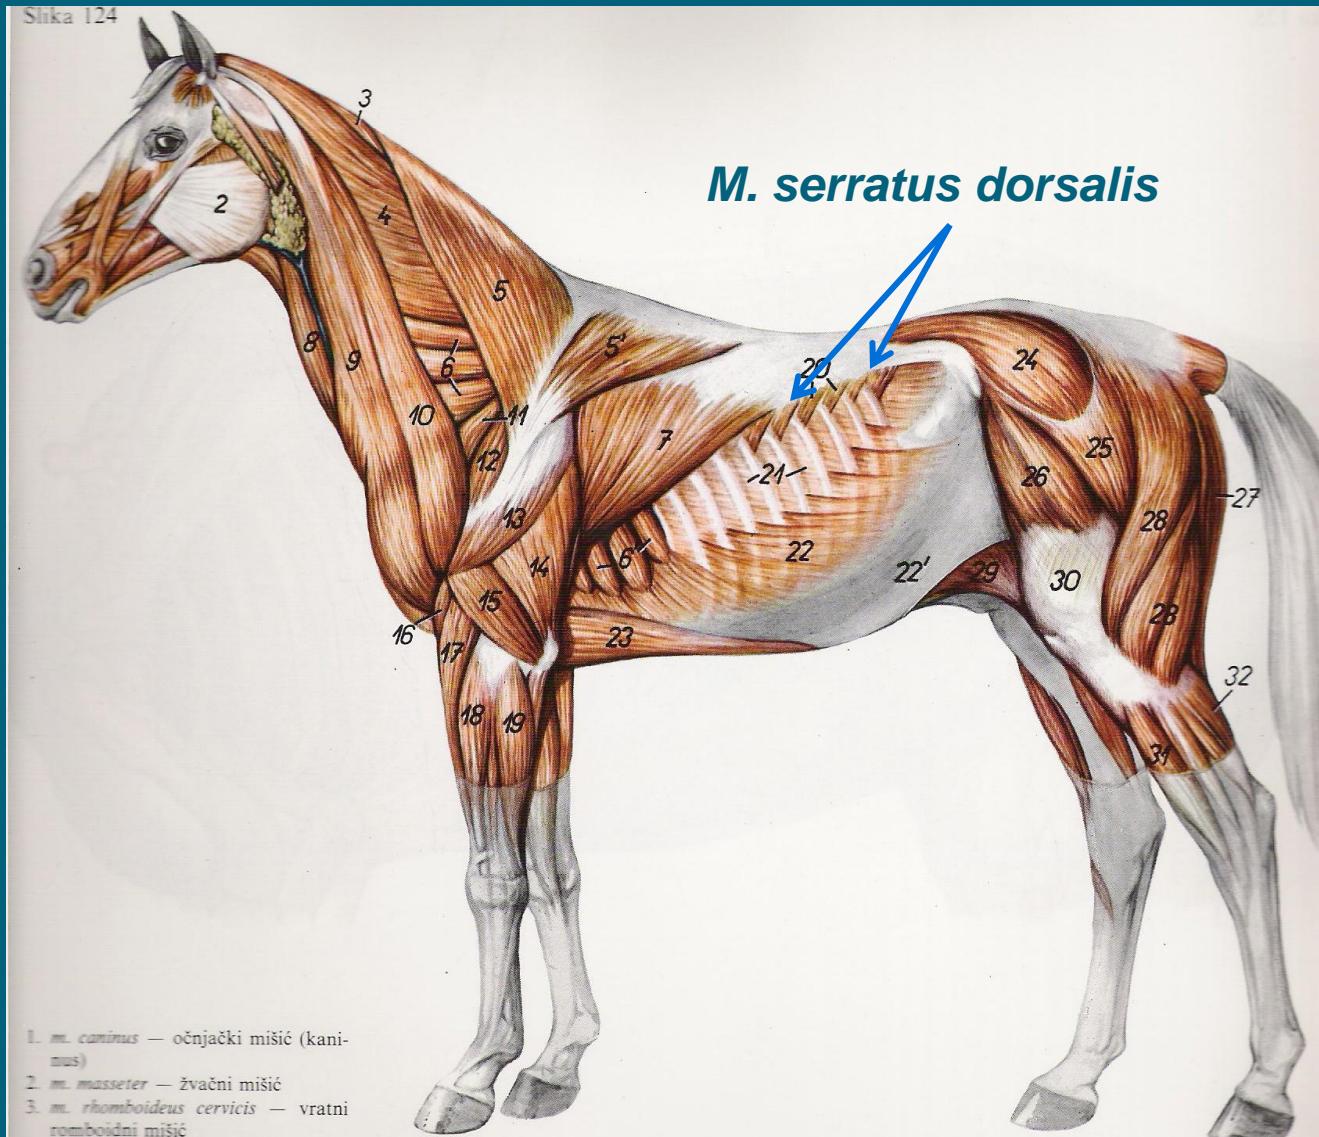

*Mišići u drugom sloju posle skidanja *M. trapezius thoracis* i *M. latissimus dorsi**

1. *M. serratus dorsalis*

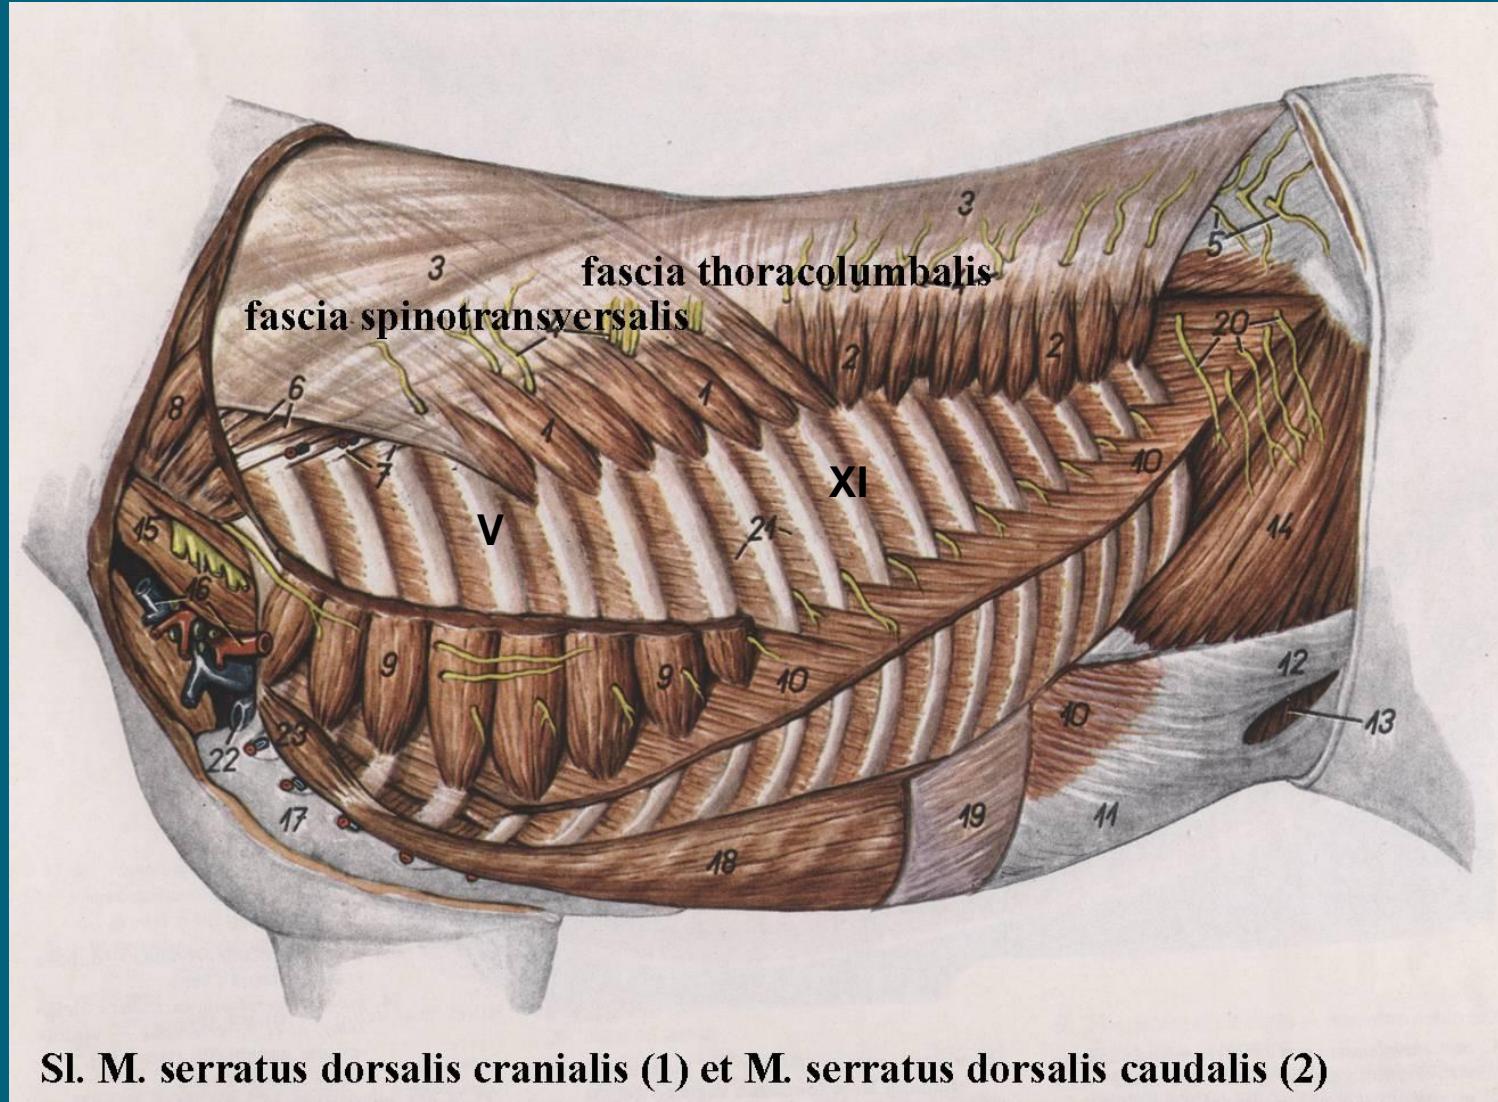

Dorzalni "zubasti" mišić

Ima 2 dela:

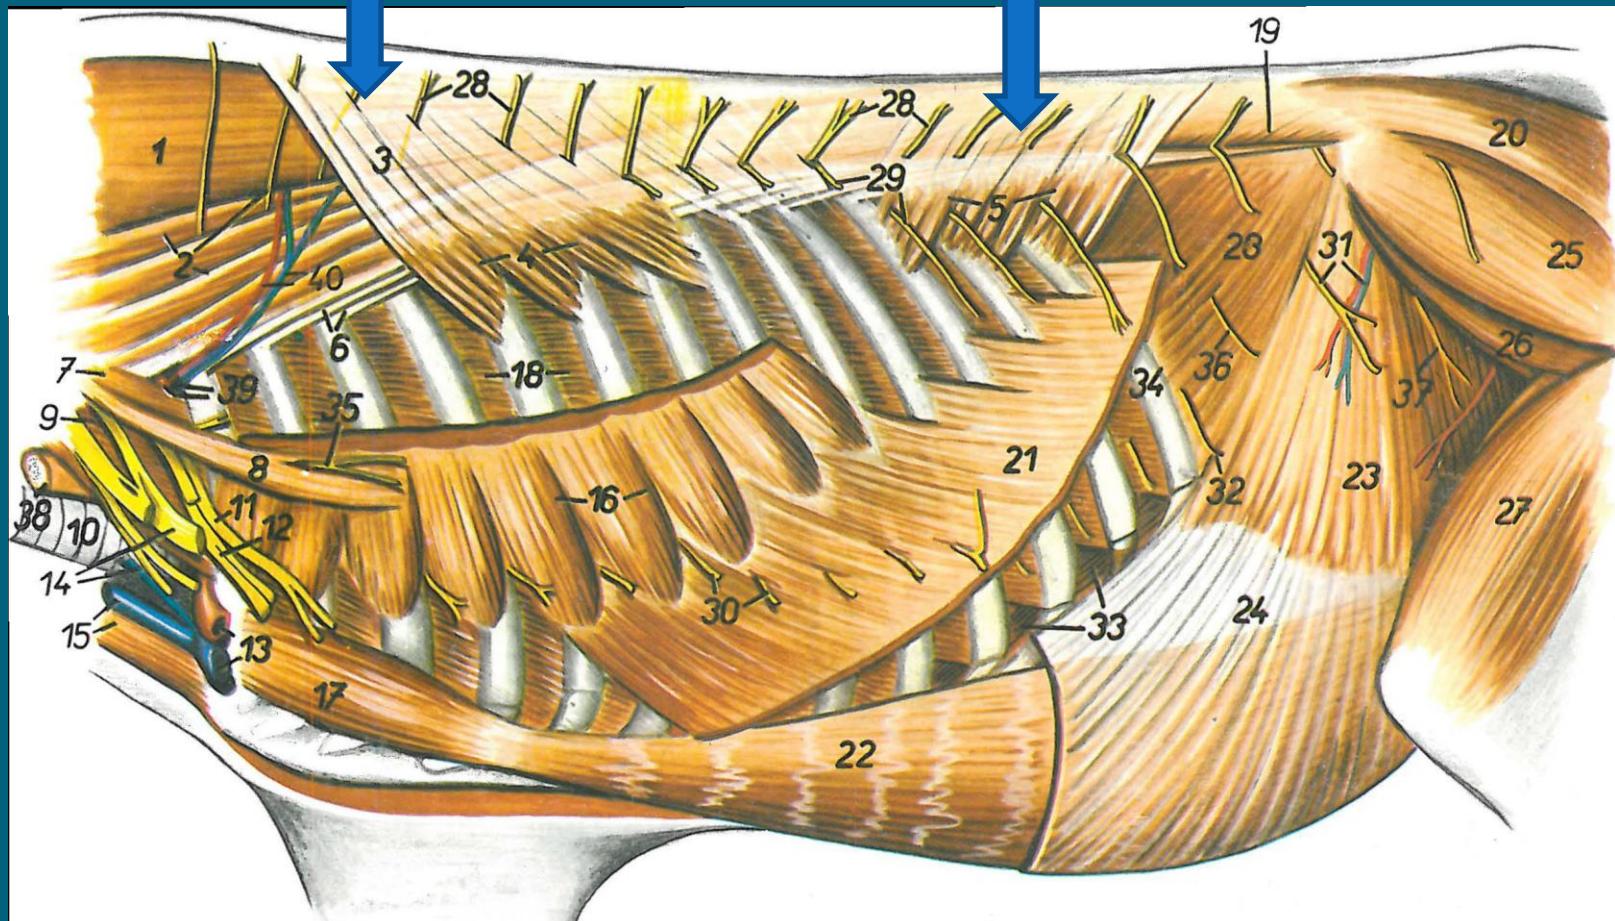

- M. serratus dorsalis cranialis***
- M. serratus dorsalis caudalis***

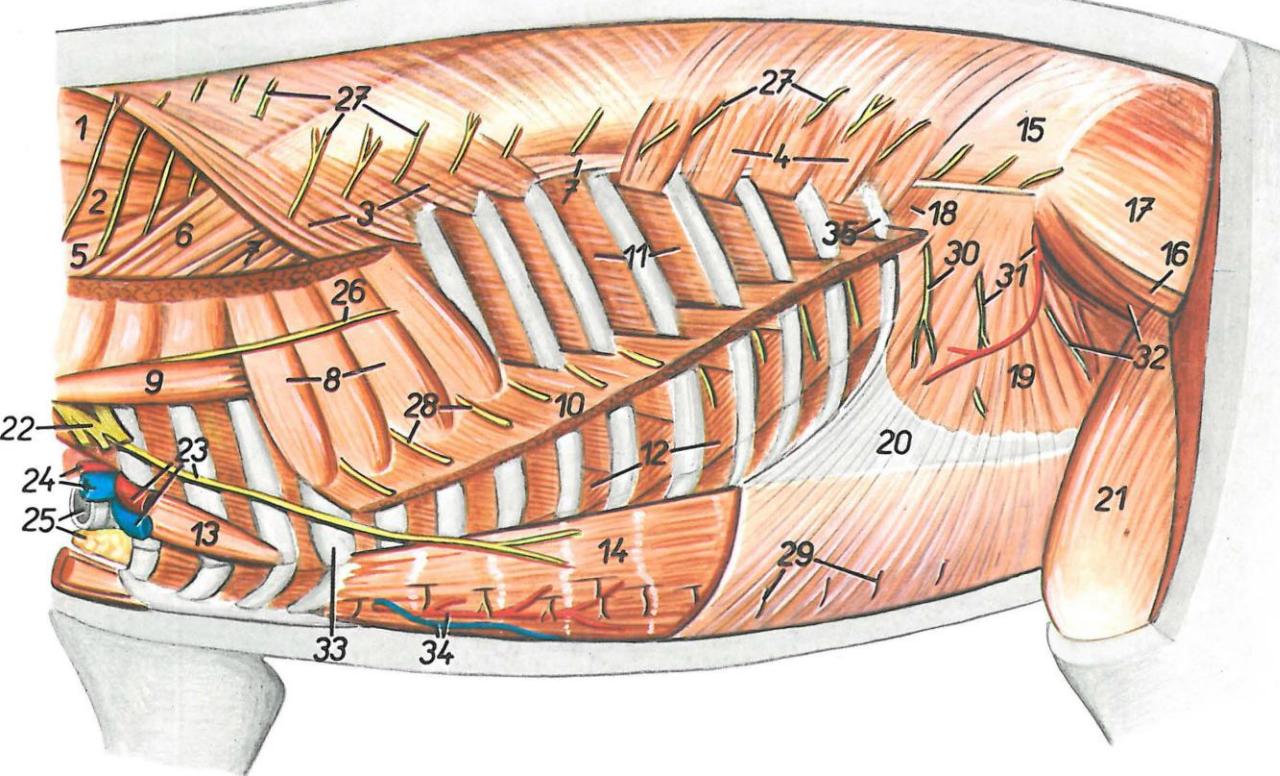

Sl. M. serratus dorsalis cranialis (1) et M. serratus dorsalis caudalis (2)

M. serratus dorsalis cranialis

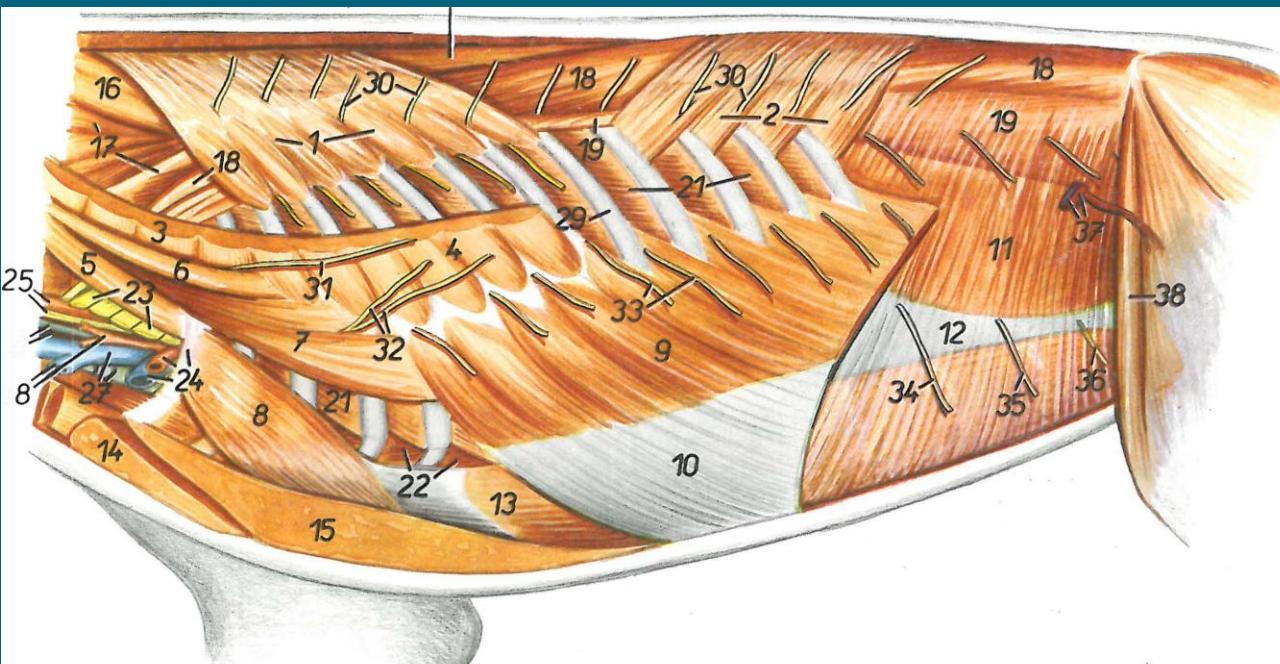

M. serratus dorsalis caudalis

GOVEĆE

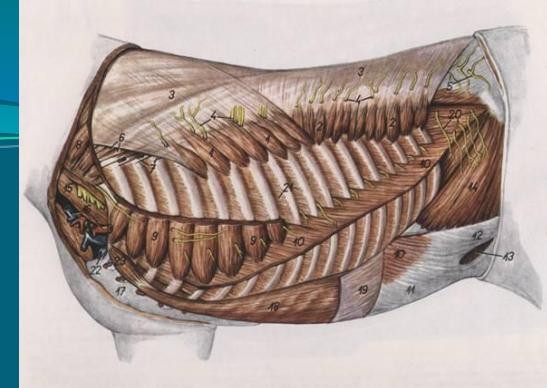

SVINJA

PAS

M. serratus dorsalis

tanak, pločast mišić, leži lateralno na dorzalnom zidu grudnog koša

1/ M. serratus dorsalis cranialis

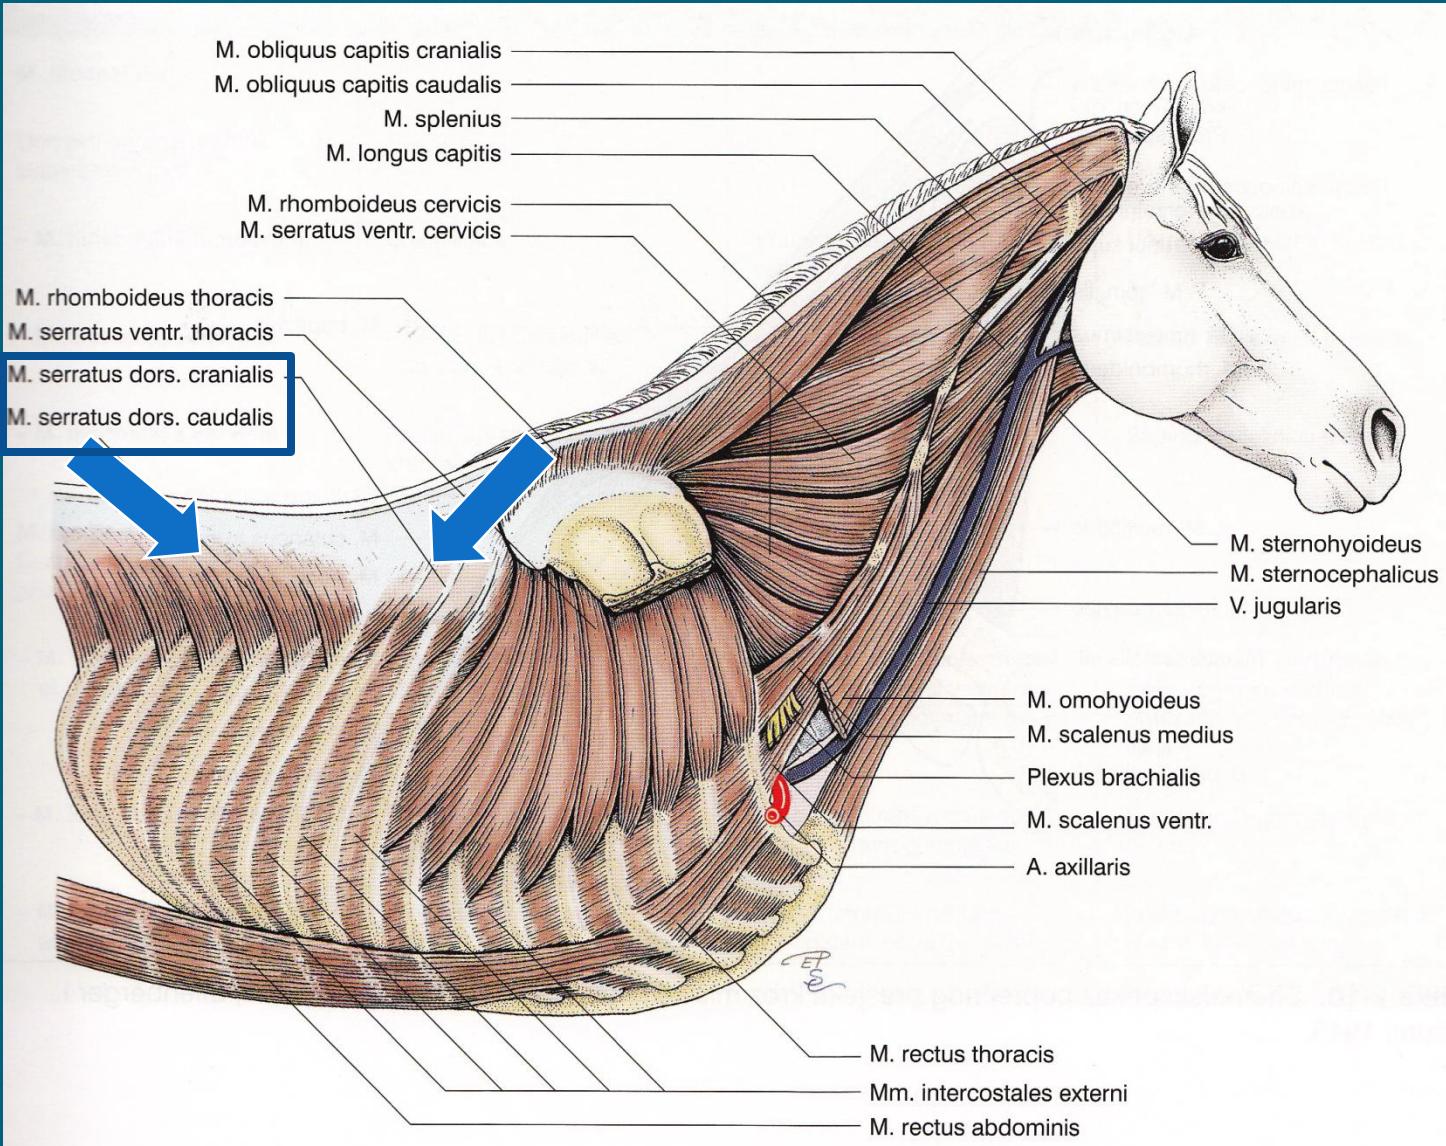

- počinje u *Fascia spinotransversalis* i vrhovima trnastih izdanaka leđnih pršljenova
- završava zubasto na kranijalnom rubu rebara: konj 5/6 -11/12
goveda 5-8

2/ M. serratus dorsalis caudalis

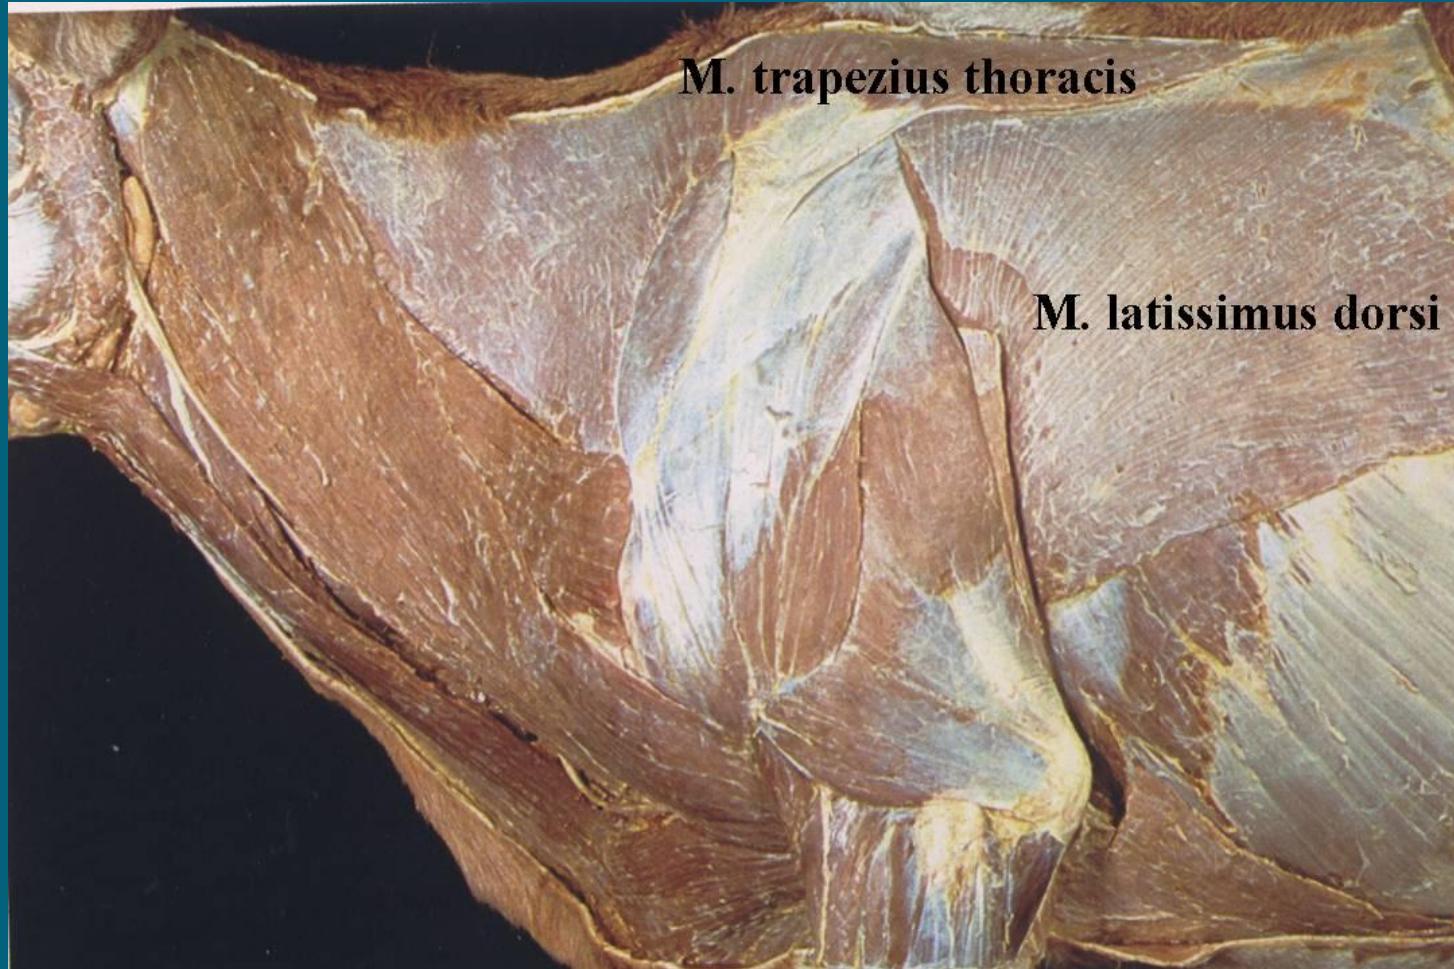

- počinje u *Fascia thoracolumbalis* i vrhovima trnastih izdanaka slabinskih pršljenova
- završava zubasto na kaudalnom rubu rebara: konj 11-18
goveda 10-13

Funkcija: *M. serratus dorsalis cranialis* – pri udisaju
M. serratus dorsalis caudalis – pri izdisaju

Inervacija: spinalni nervi – *Nn. intercostales*

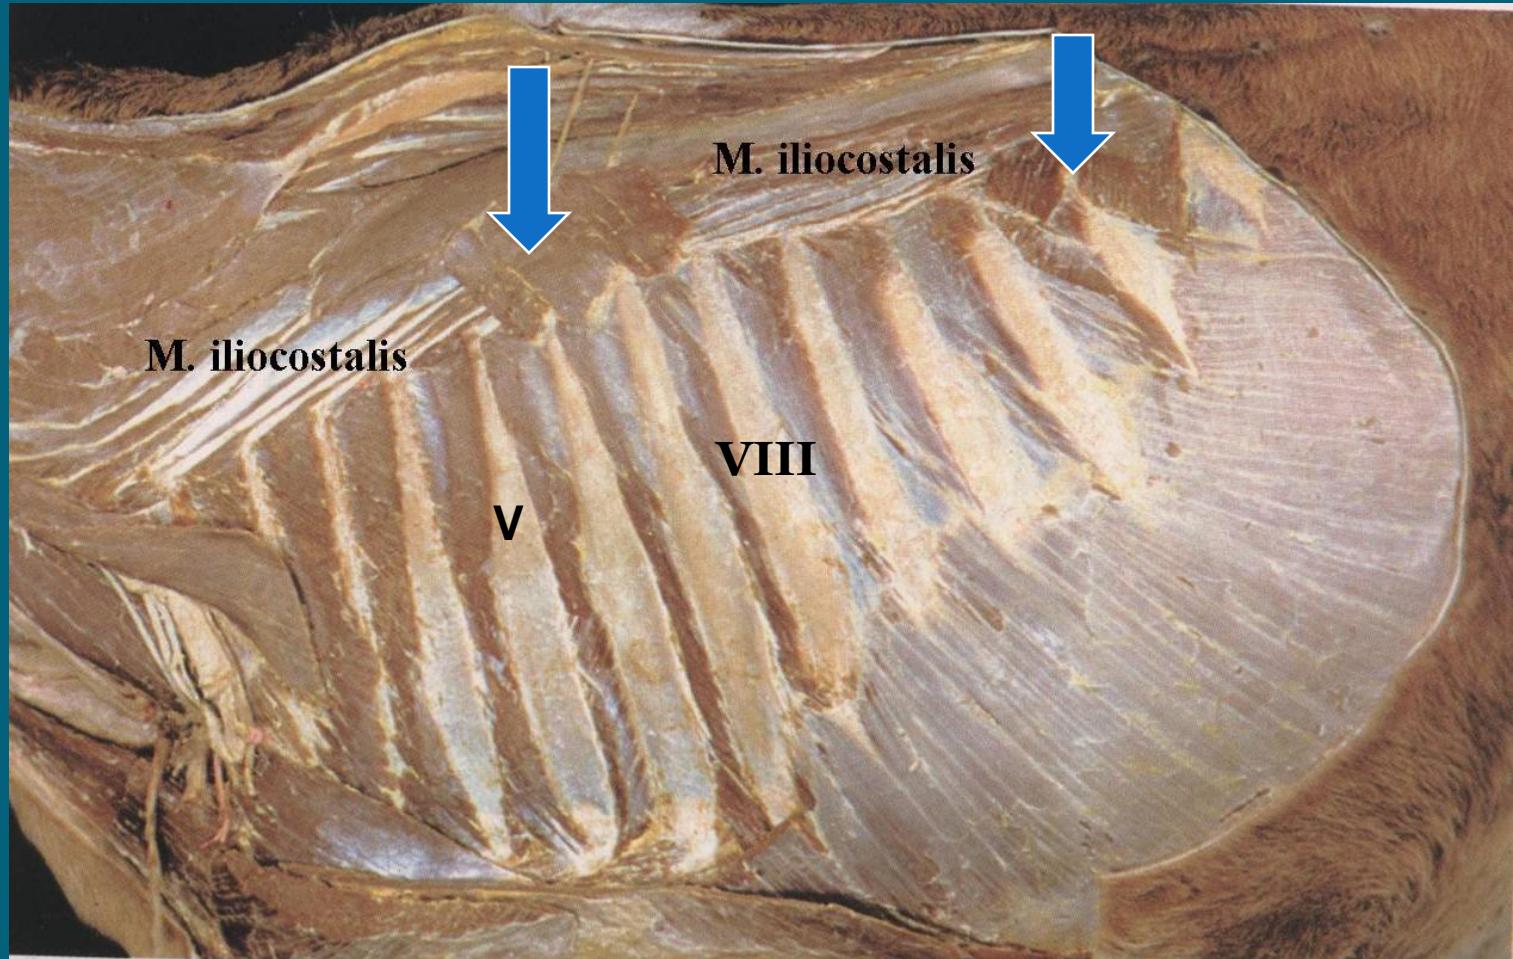

***Mišići u prvom sloju posle skidanja kože i površne fascije trupa
(goveče)***

**Mišići u drugom sloju posle skidanja prednjeg ekstremiteta i uklanjanja
M. trapezius thoracis i M. latissimus dorsi
(goveče)**

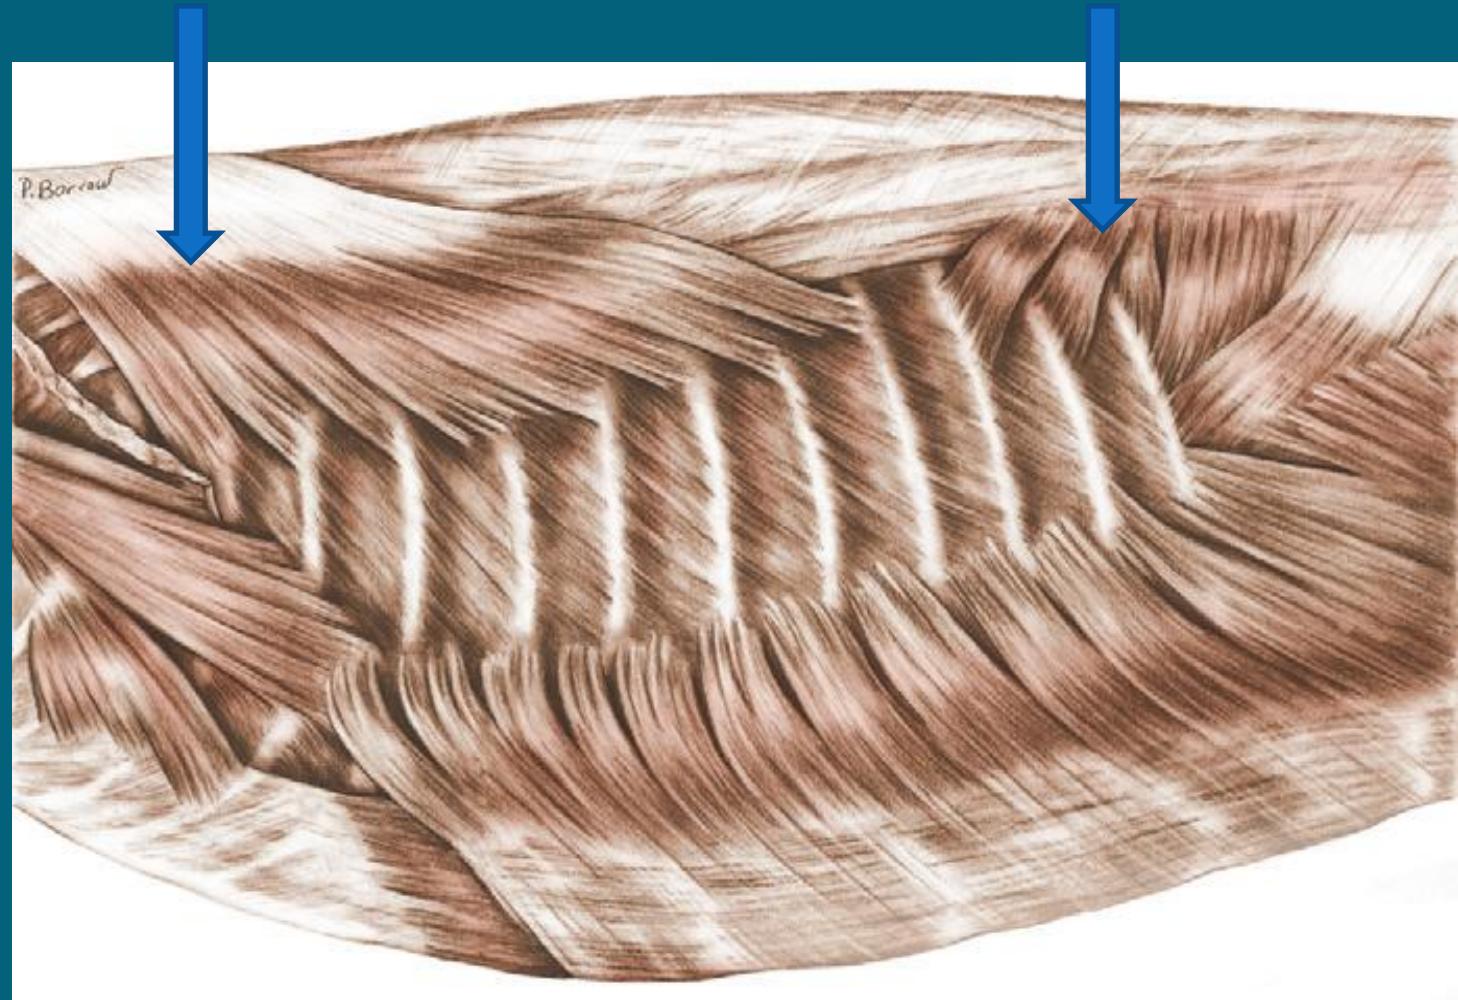

M. serratus dorsalis cranialis *M. serratus dorsalis caudalis*

*Mišići u sloju posle skidanja prednjeg ekstremiteta i uklanjanja:
M. trapezius thoracis, M. latissimus dorsi i M. serratus ventralis-a
(goveče)*

M. serratus dorsalis cranialis

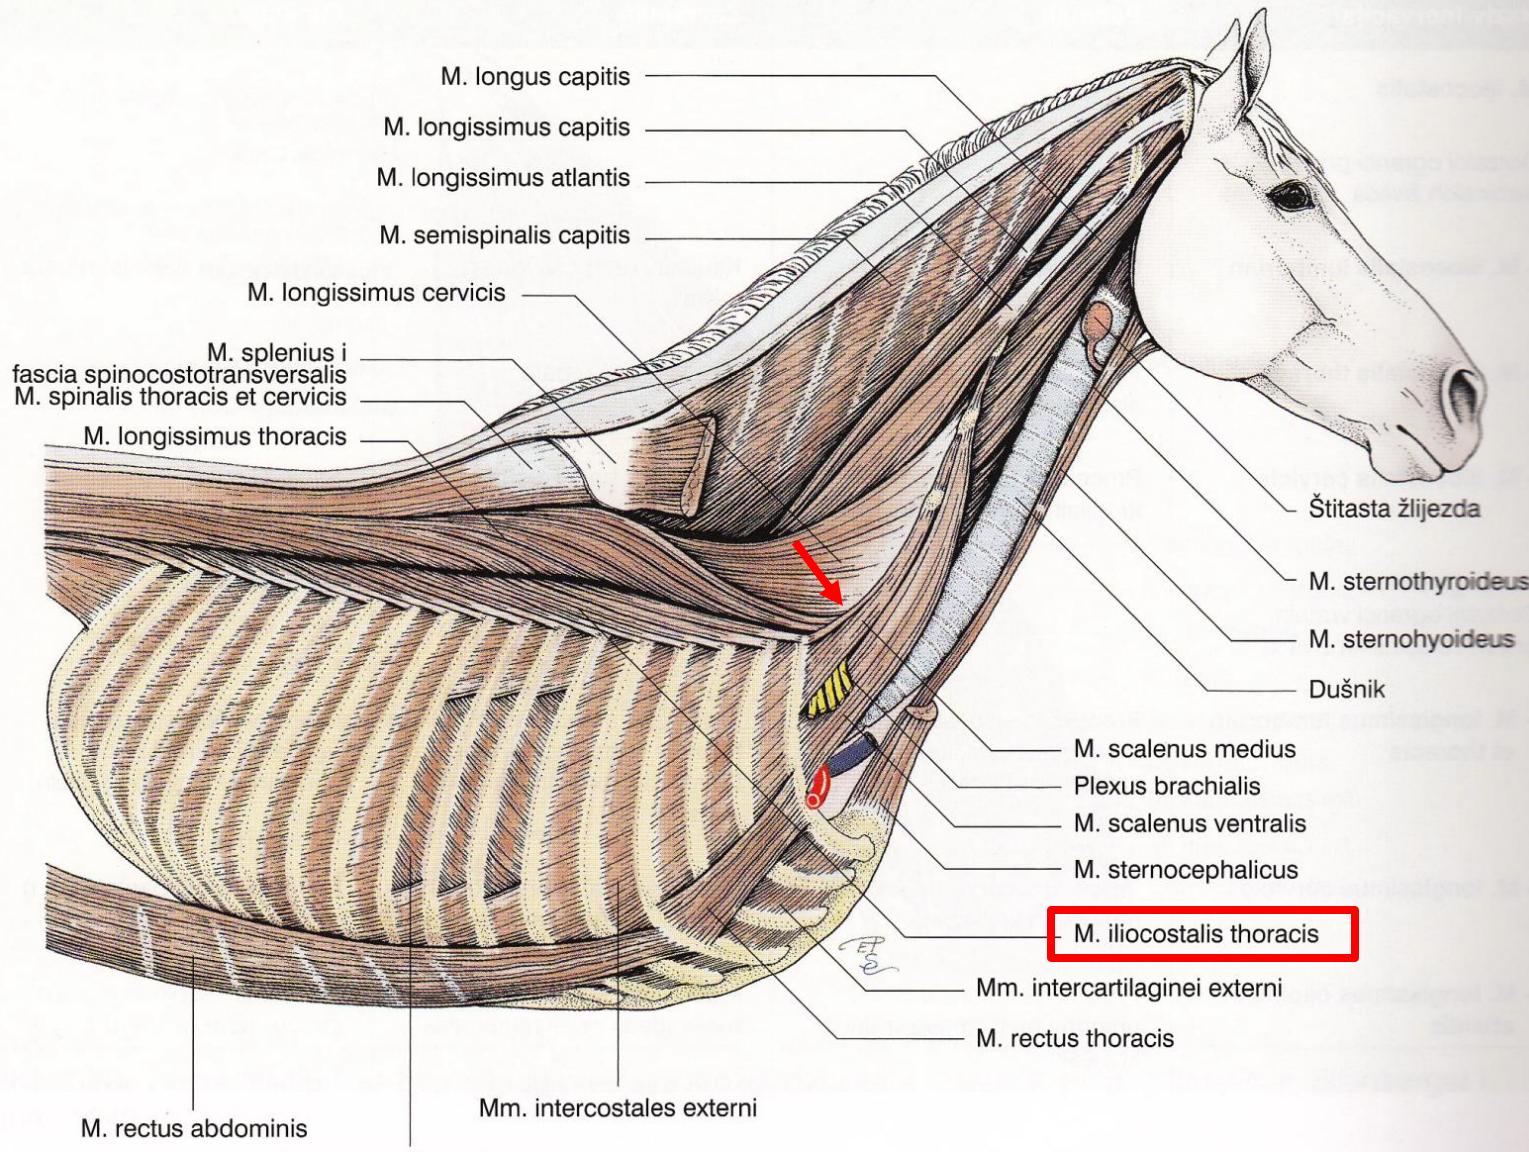

M. serratus dorsalis caudalis

PAS

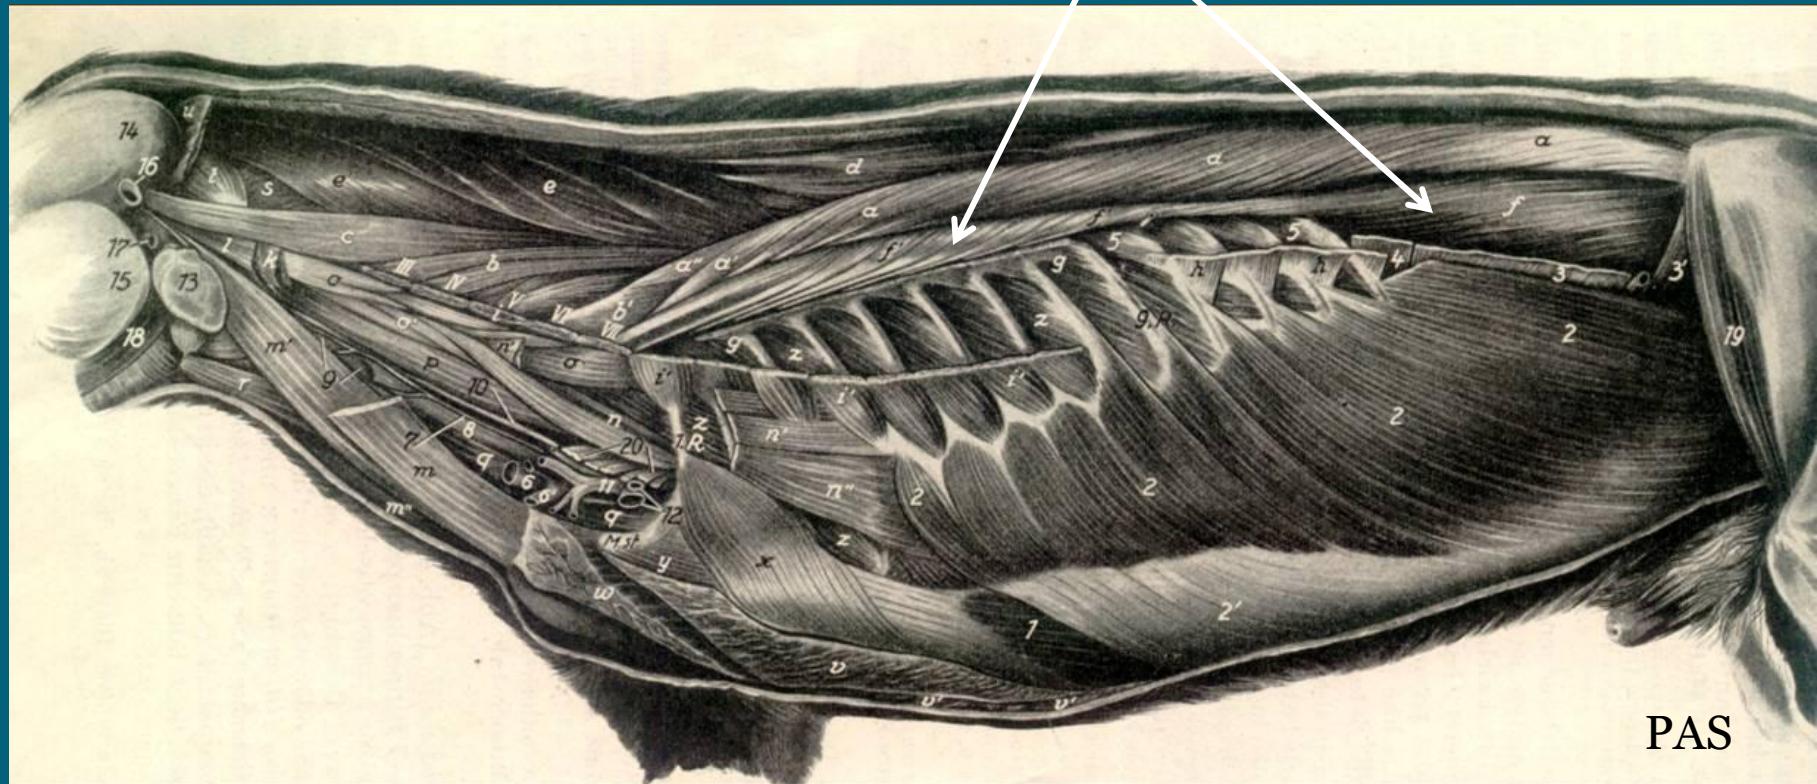

2. *M. iliocostalis*

- dug, uzan, pljosnat mišić protkan tetivnim vlaknima
- pruža se od *Crista iliaca* (karlične kosti) do vratnih pršljenova

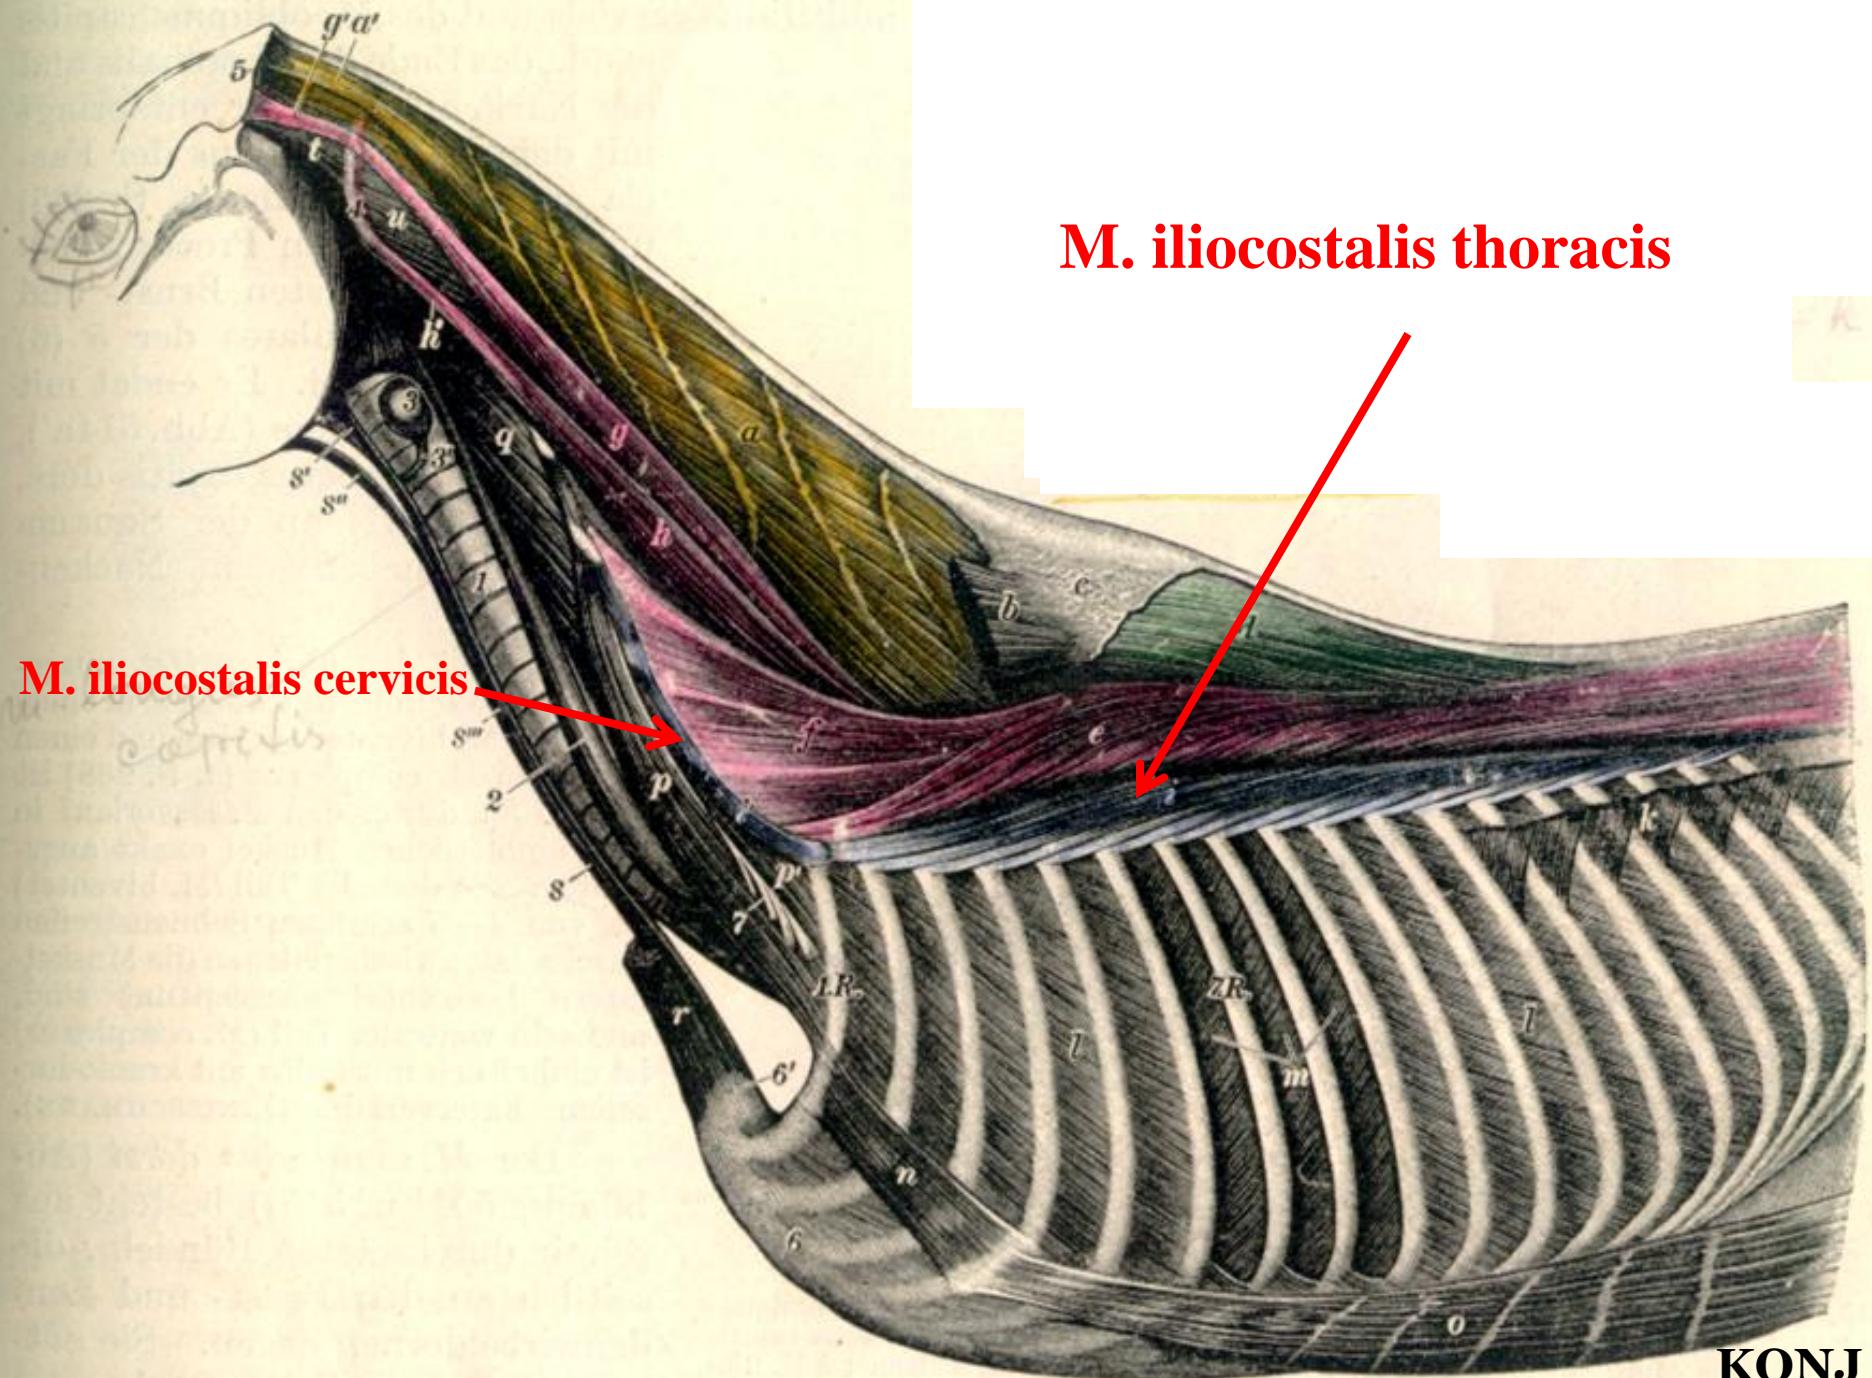

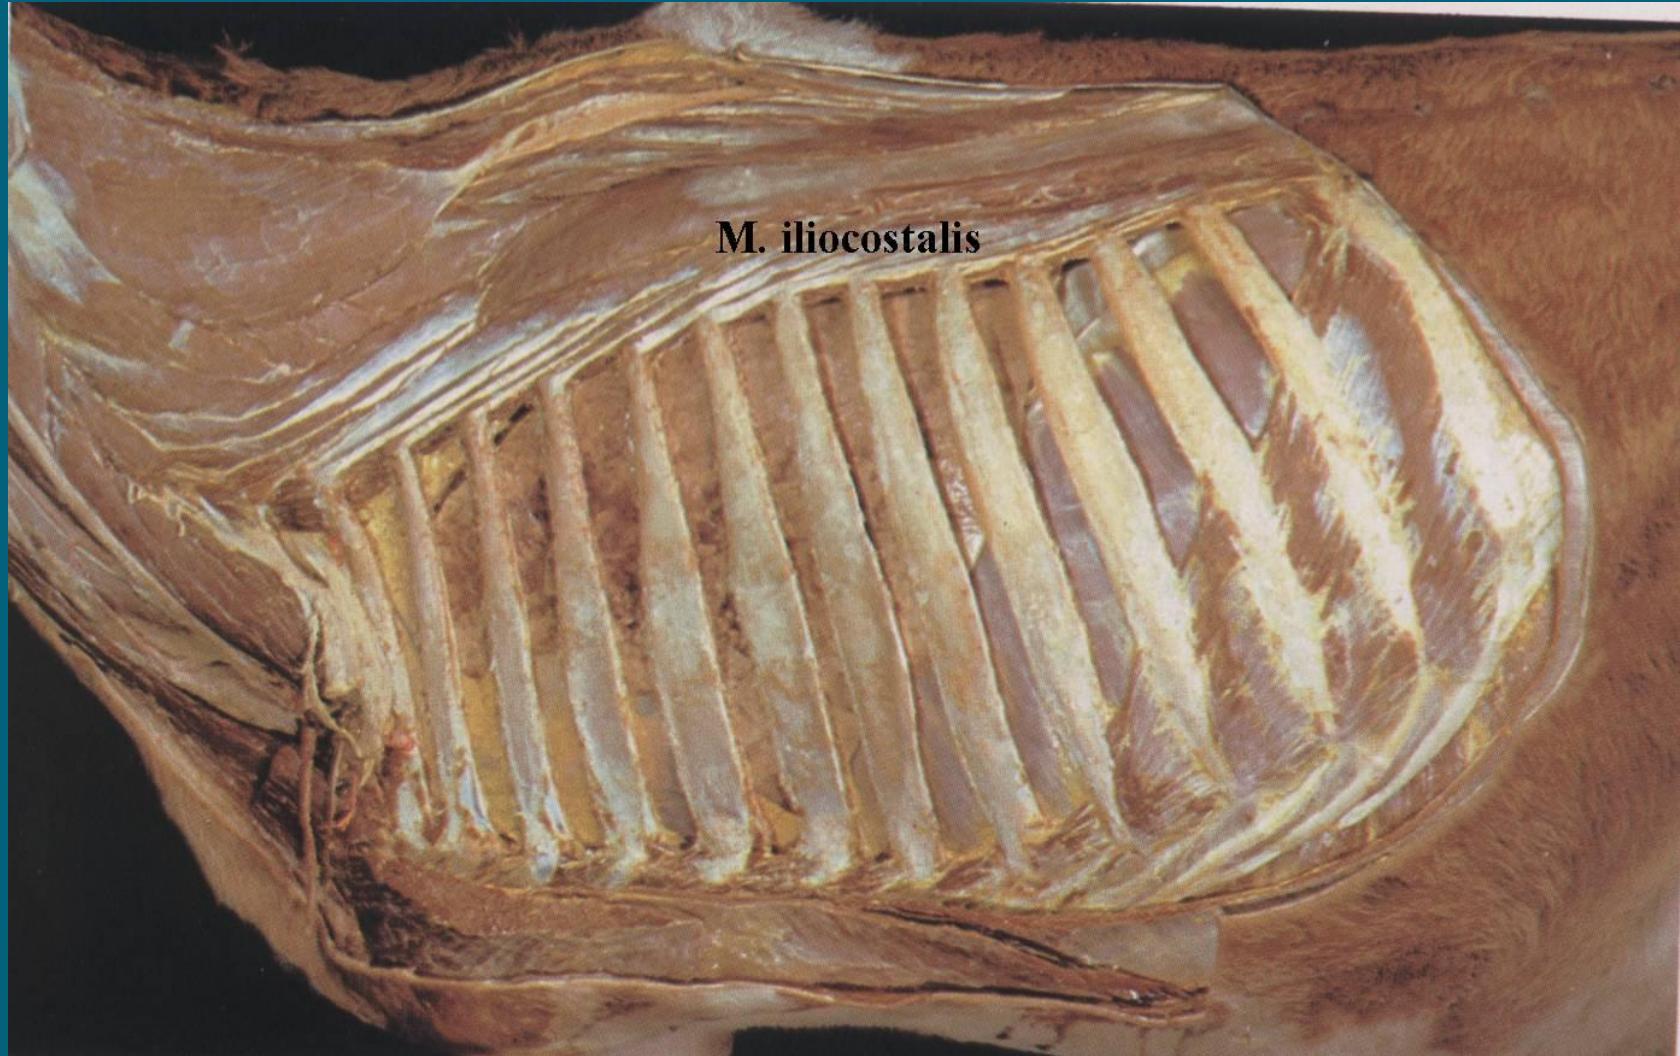

M. iliocostalis

1. *M. iliocostalis lumborum* - slabinski deo
 2. *M. iliocostalis thoracis* - grudni deo
 3. *M. iliocostalis cervicis* - vratni deo

M. iliocostalis thoracis

GOVEĆE

M. iliocostalis

Slabinski deo (pars lumborum) – *M. iliocostalis lumborum*

Leđni deo (pars thoracis) – *M. iliocostalis thoracis*

Vratni deo (pars cervicis) – *M. iliocostalis cervicis*

Funkcija:

- 1/ učvršćuje slabinski i torakalni deo kičmenog stuba
- 2/ pri jednostranom delovanju savija kičmeni stub u stranu
- 3/ vuče rebra kaudalno (**pomaže u izdisaju**)

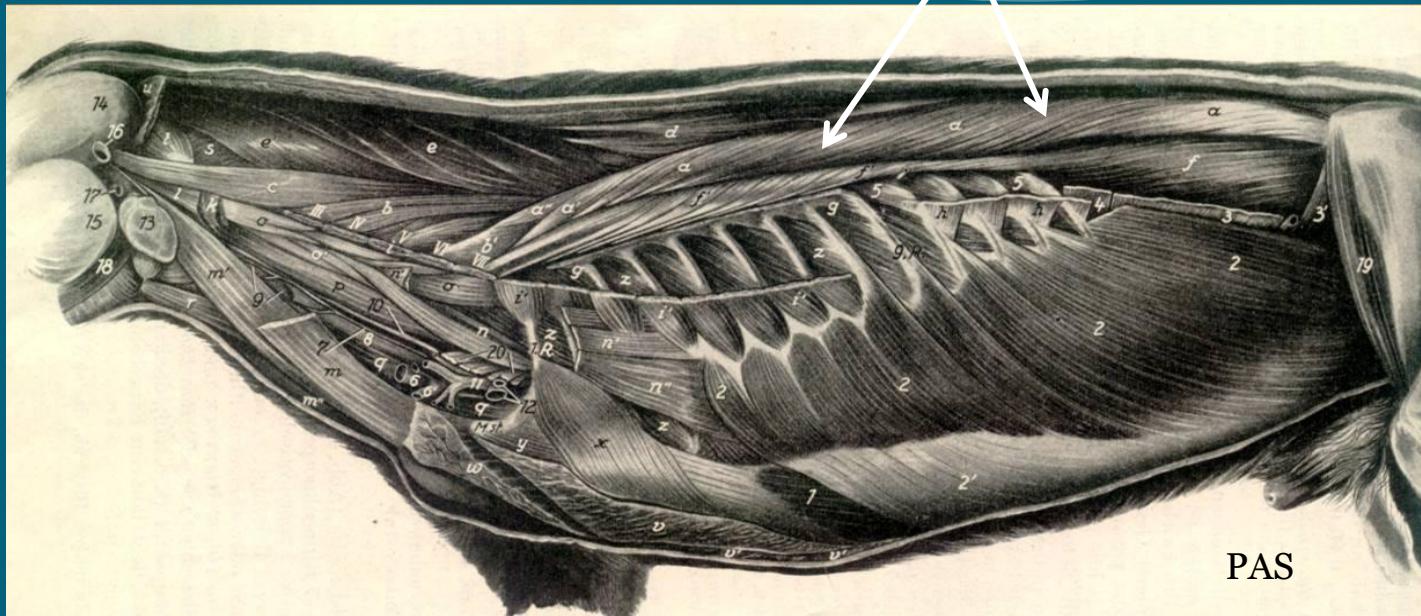

Inervacija: spinalni nervi – *Nn. thoracales et lumbales (Rami dorsales)*

3. M. longissimus

M. longissimus

- najduži mišić tela, najjači ekstensor leđnog i slabinskog dela kičme
- od krsne i karlične kosti do vrata/glave - prihvatajući se za transverzalne izdanke
- iznad M. iliocostalis - a

M. longissimus lumborum (najbolje razvijeni deo, leži ispod torakolumbalne fascije)

počinje na:

- trnastim izdancima krsnih i lumbalnih pršljenova
- os coxae (*Crista iliaca*, *Tuber coxae*, ventralna površina krila *Os ilium*)

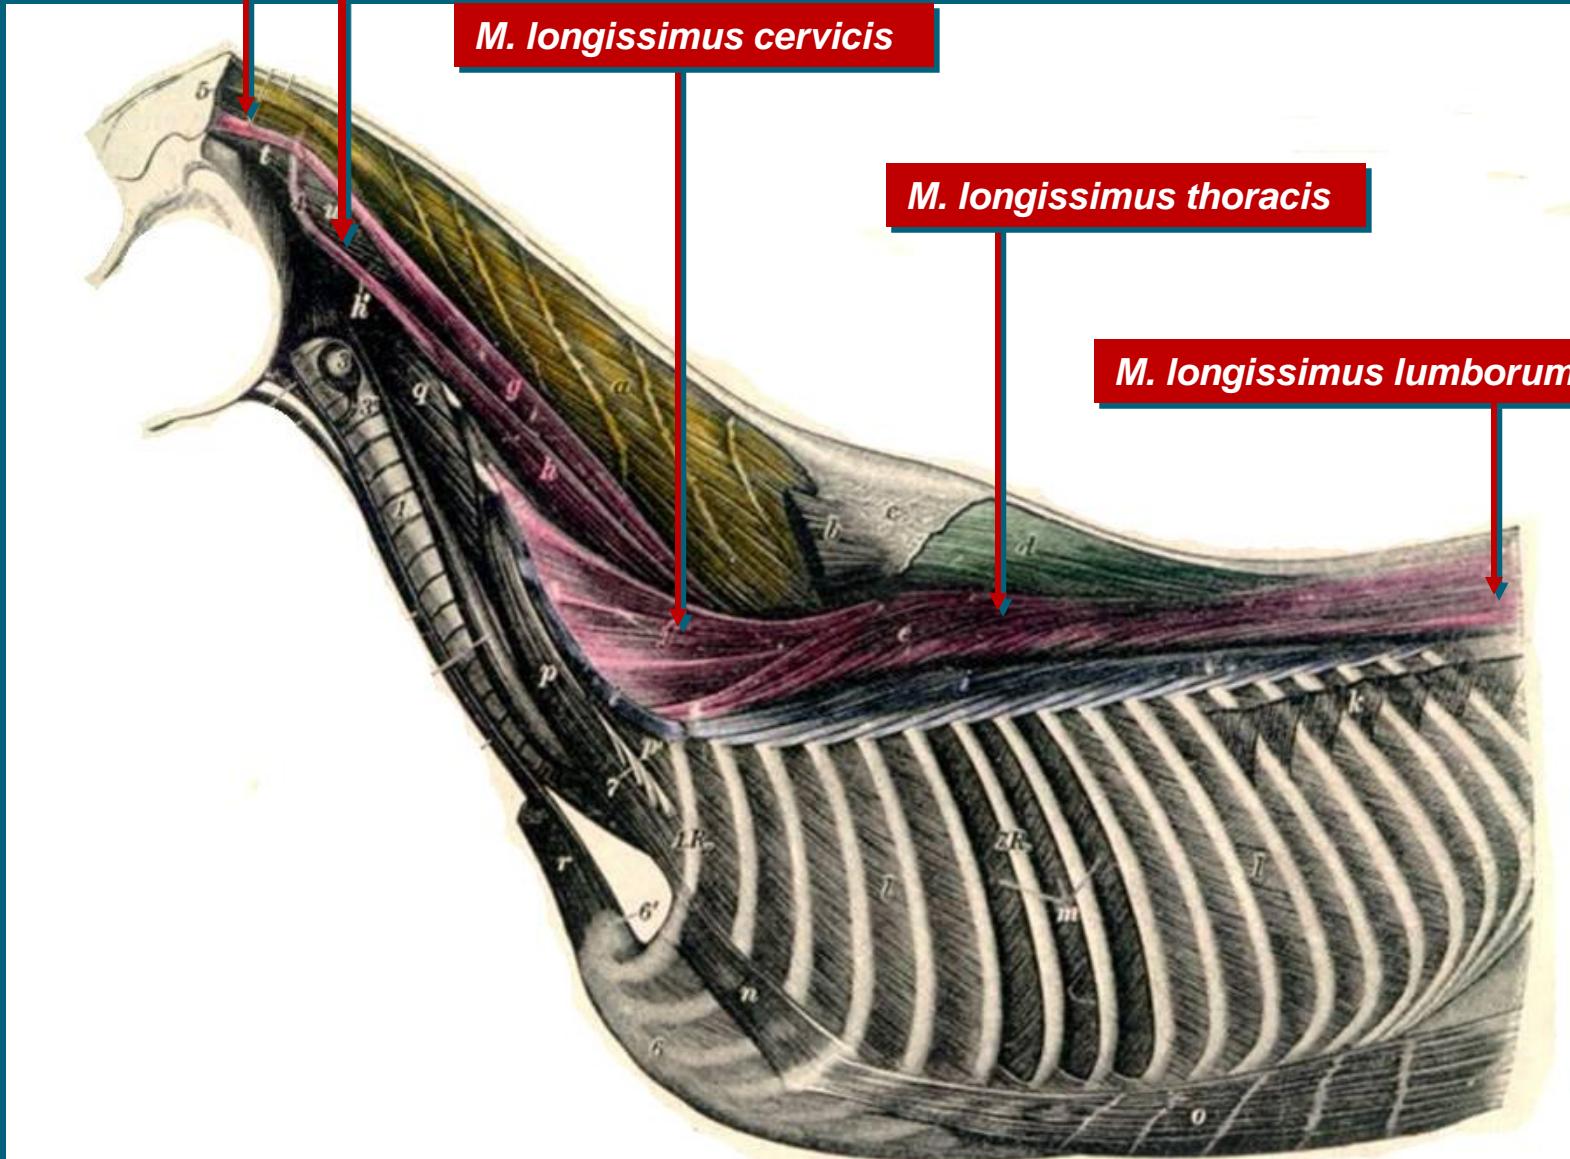

M. longissimus capititis

M. longissimus atlantis

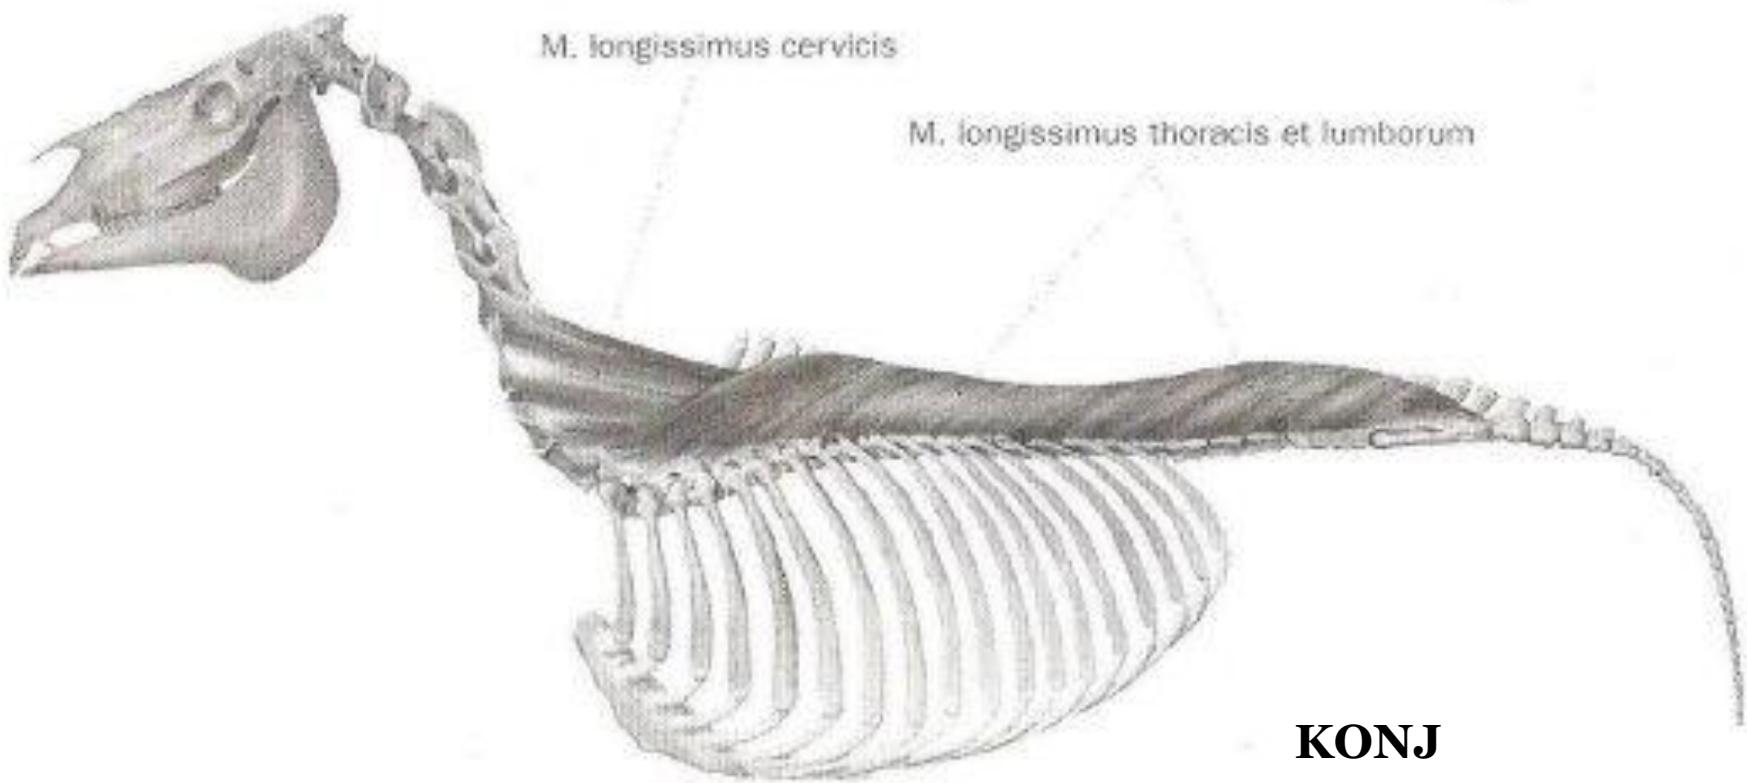

M. longissimus cervicis

M. longissimus thoracis

M. longissimus lumborum

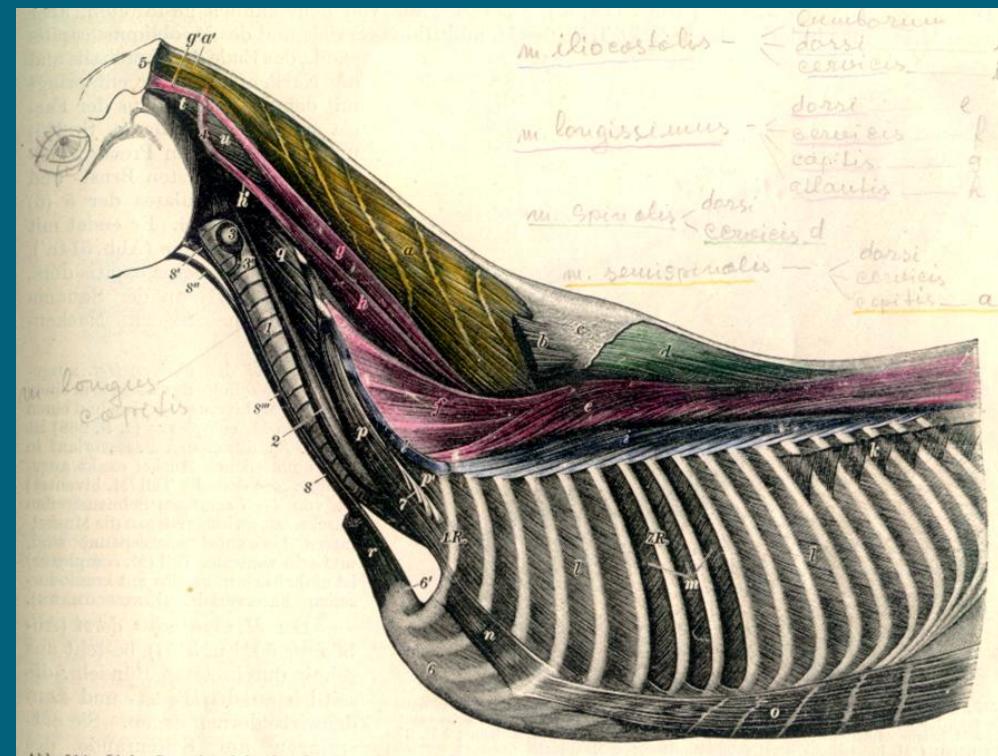

M. longissimus

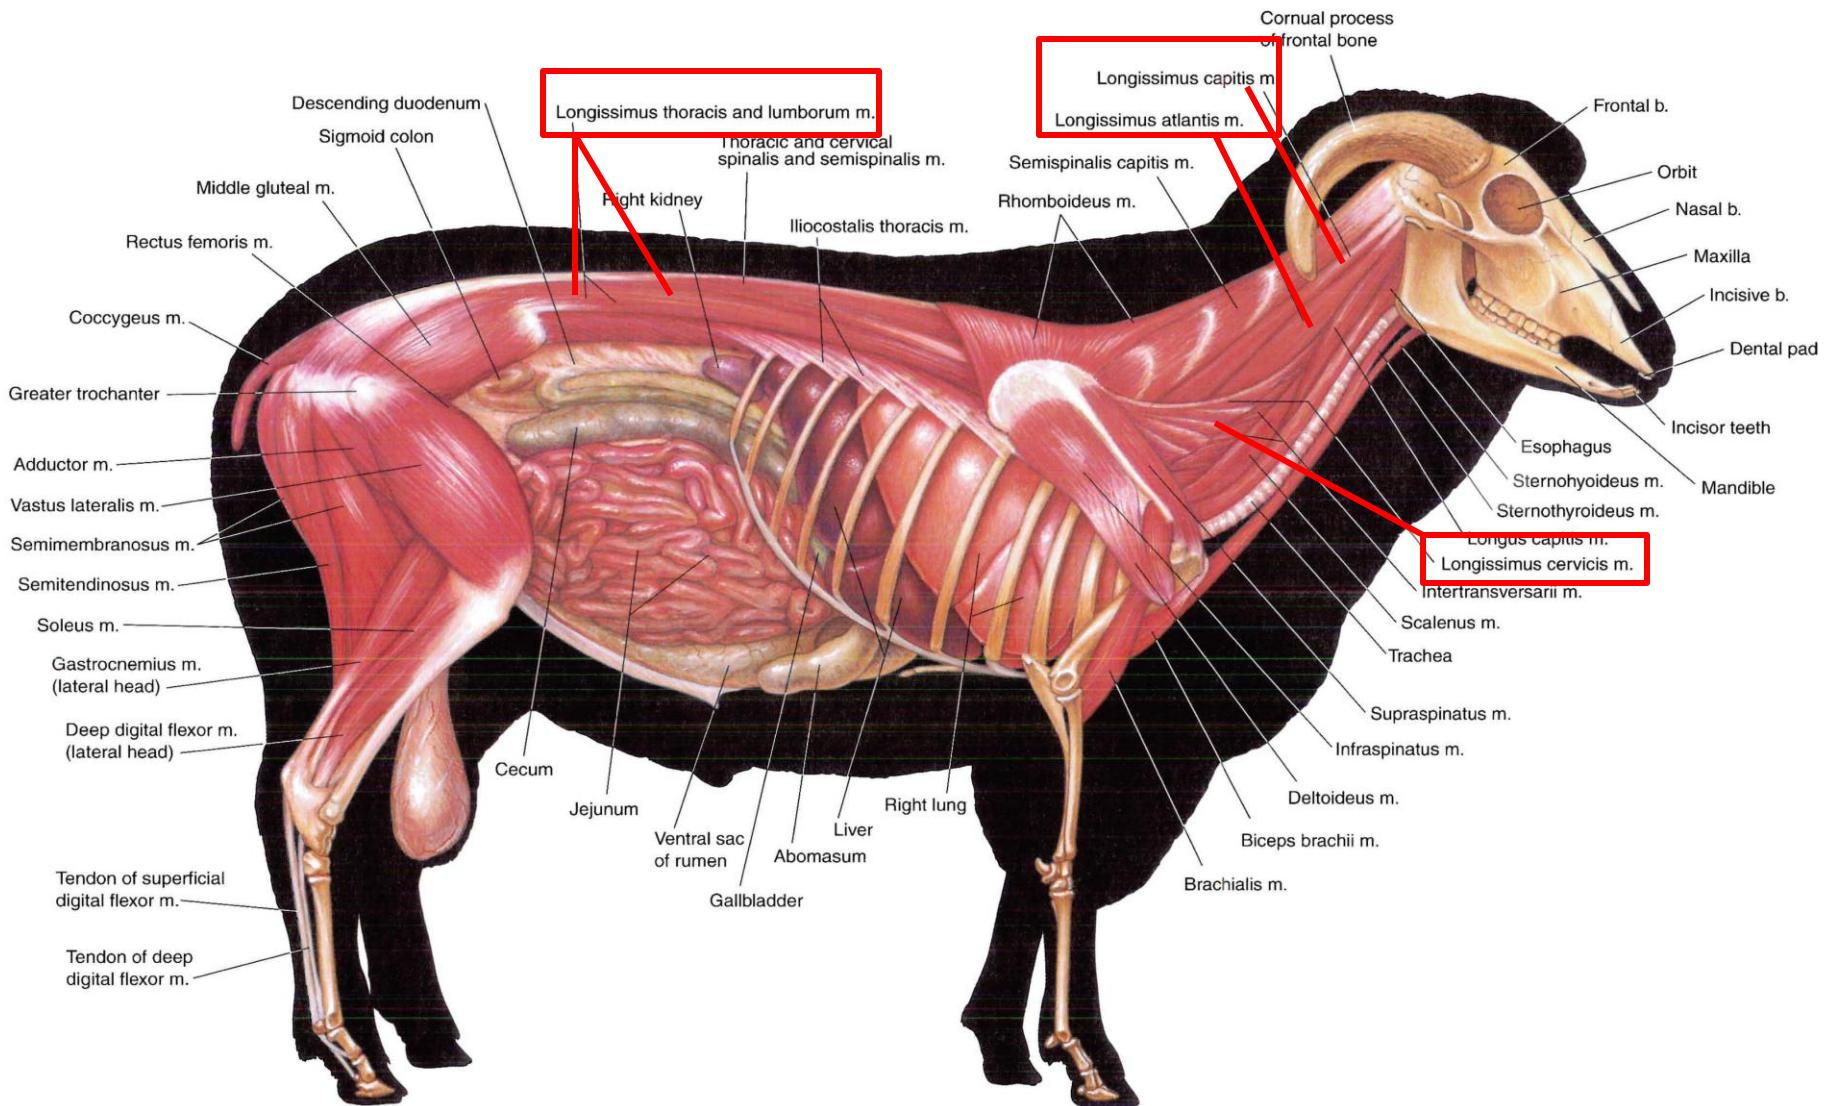

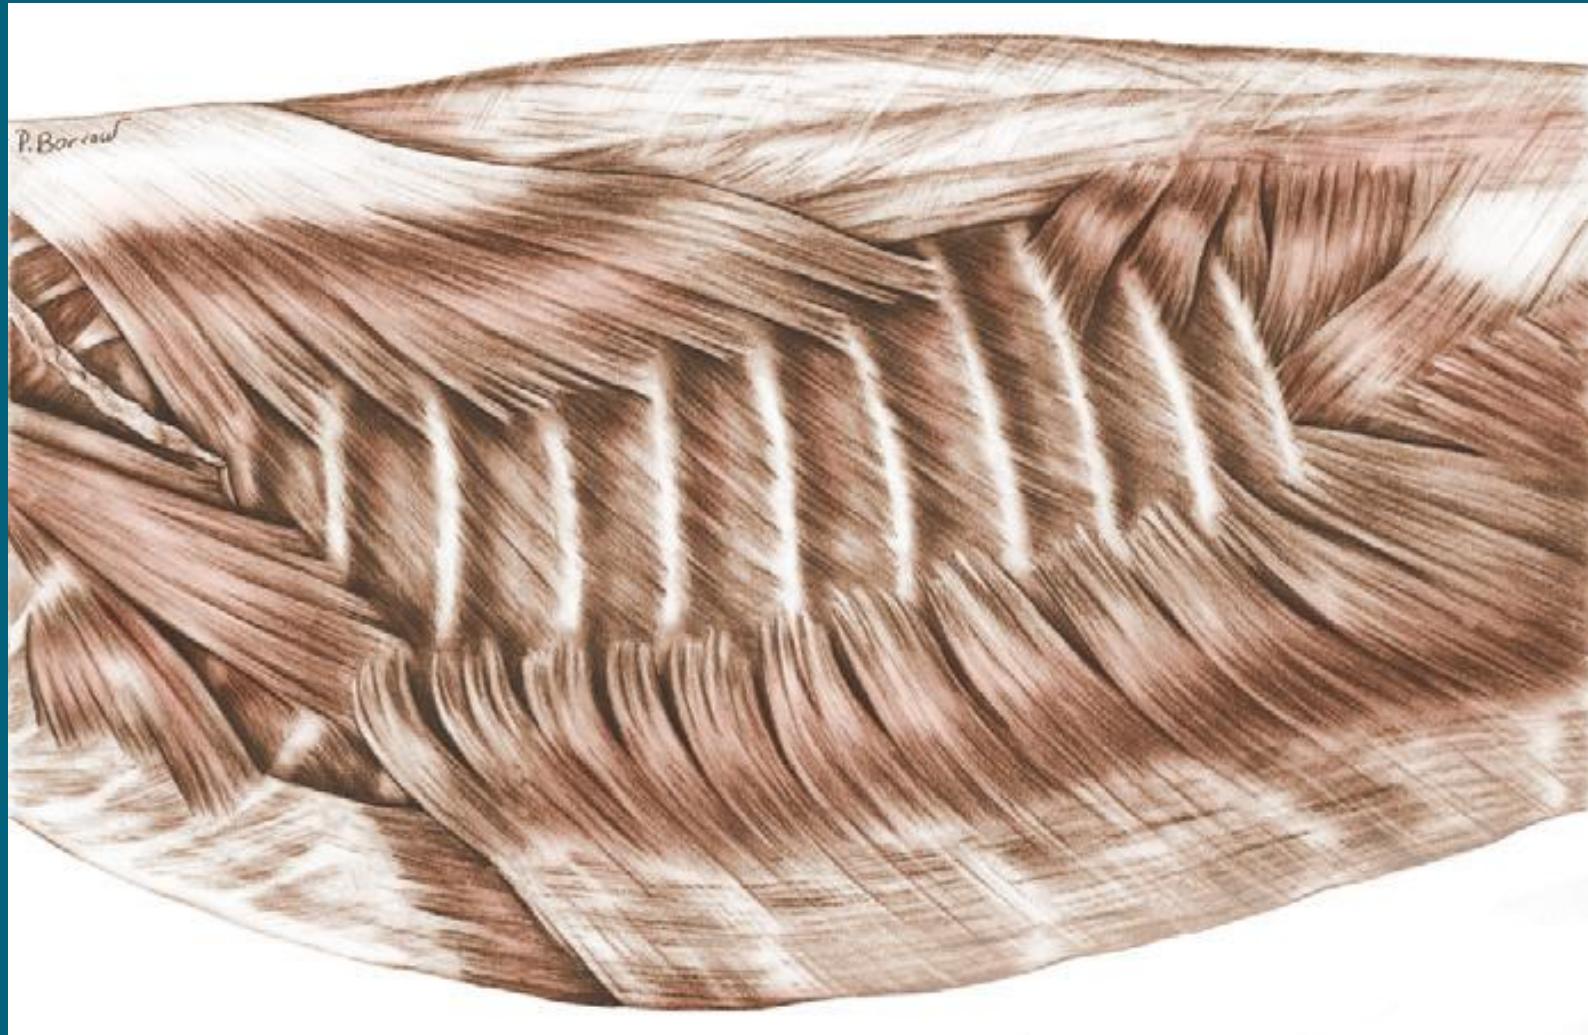

KONJ

KONJ

- 1 M. obliquus capitis caudalis
- 2 Cut edge of M. longissimus capitis
- 3 M. longissimus atlantis
- 4 M. semispinalis capitis
- 5 Nuchal ligament, funicular part
- 6 M. longissimus cervicis
- 7 M. longissimus thoracis
- 8 M. spinalis thoracis
- 9 M. iliocostalis thoracis
- 10 M. obliquus externus abdominis
- 11 M. intercostales externi
- 12 M. sternohyoideus and M. sternothyroideus
- 13 Trachea

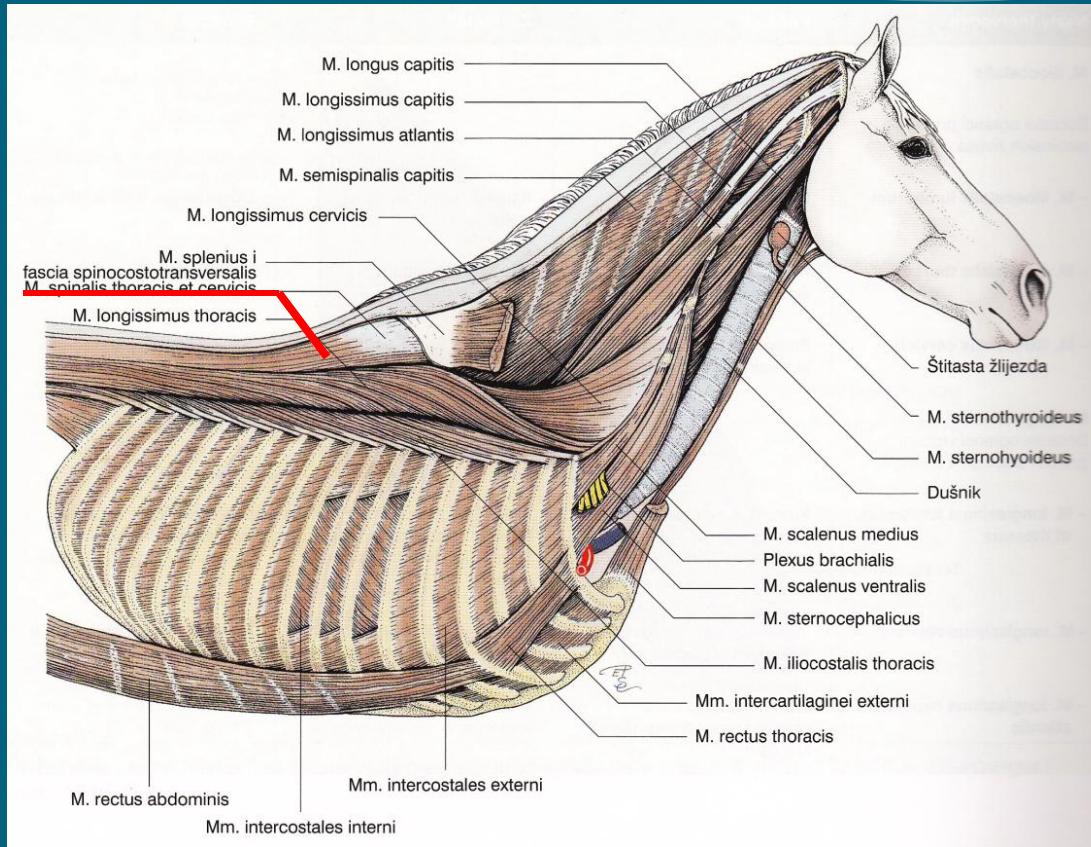

PAS

4. *M. spinalis*

M. spinalis (thoracis et cervicis)

- počinje najdorzalnije na kičmenom stubu u slabinskem i leđnom delu
 - prihvata se tetivasto za vrhove spinalnih izdanaka
 - na ventralnoj strani formira žleb u kojem se nalazi *M. longissimus*
 - završava: na trnastim izdancima poslednjih vratnih pršljenova
 - učvršćuje leđni deo kičme i podiže vrat
- Inervacija: **spinalni nervi – Nn. cervicales, thoracales et lumbales**

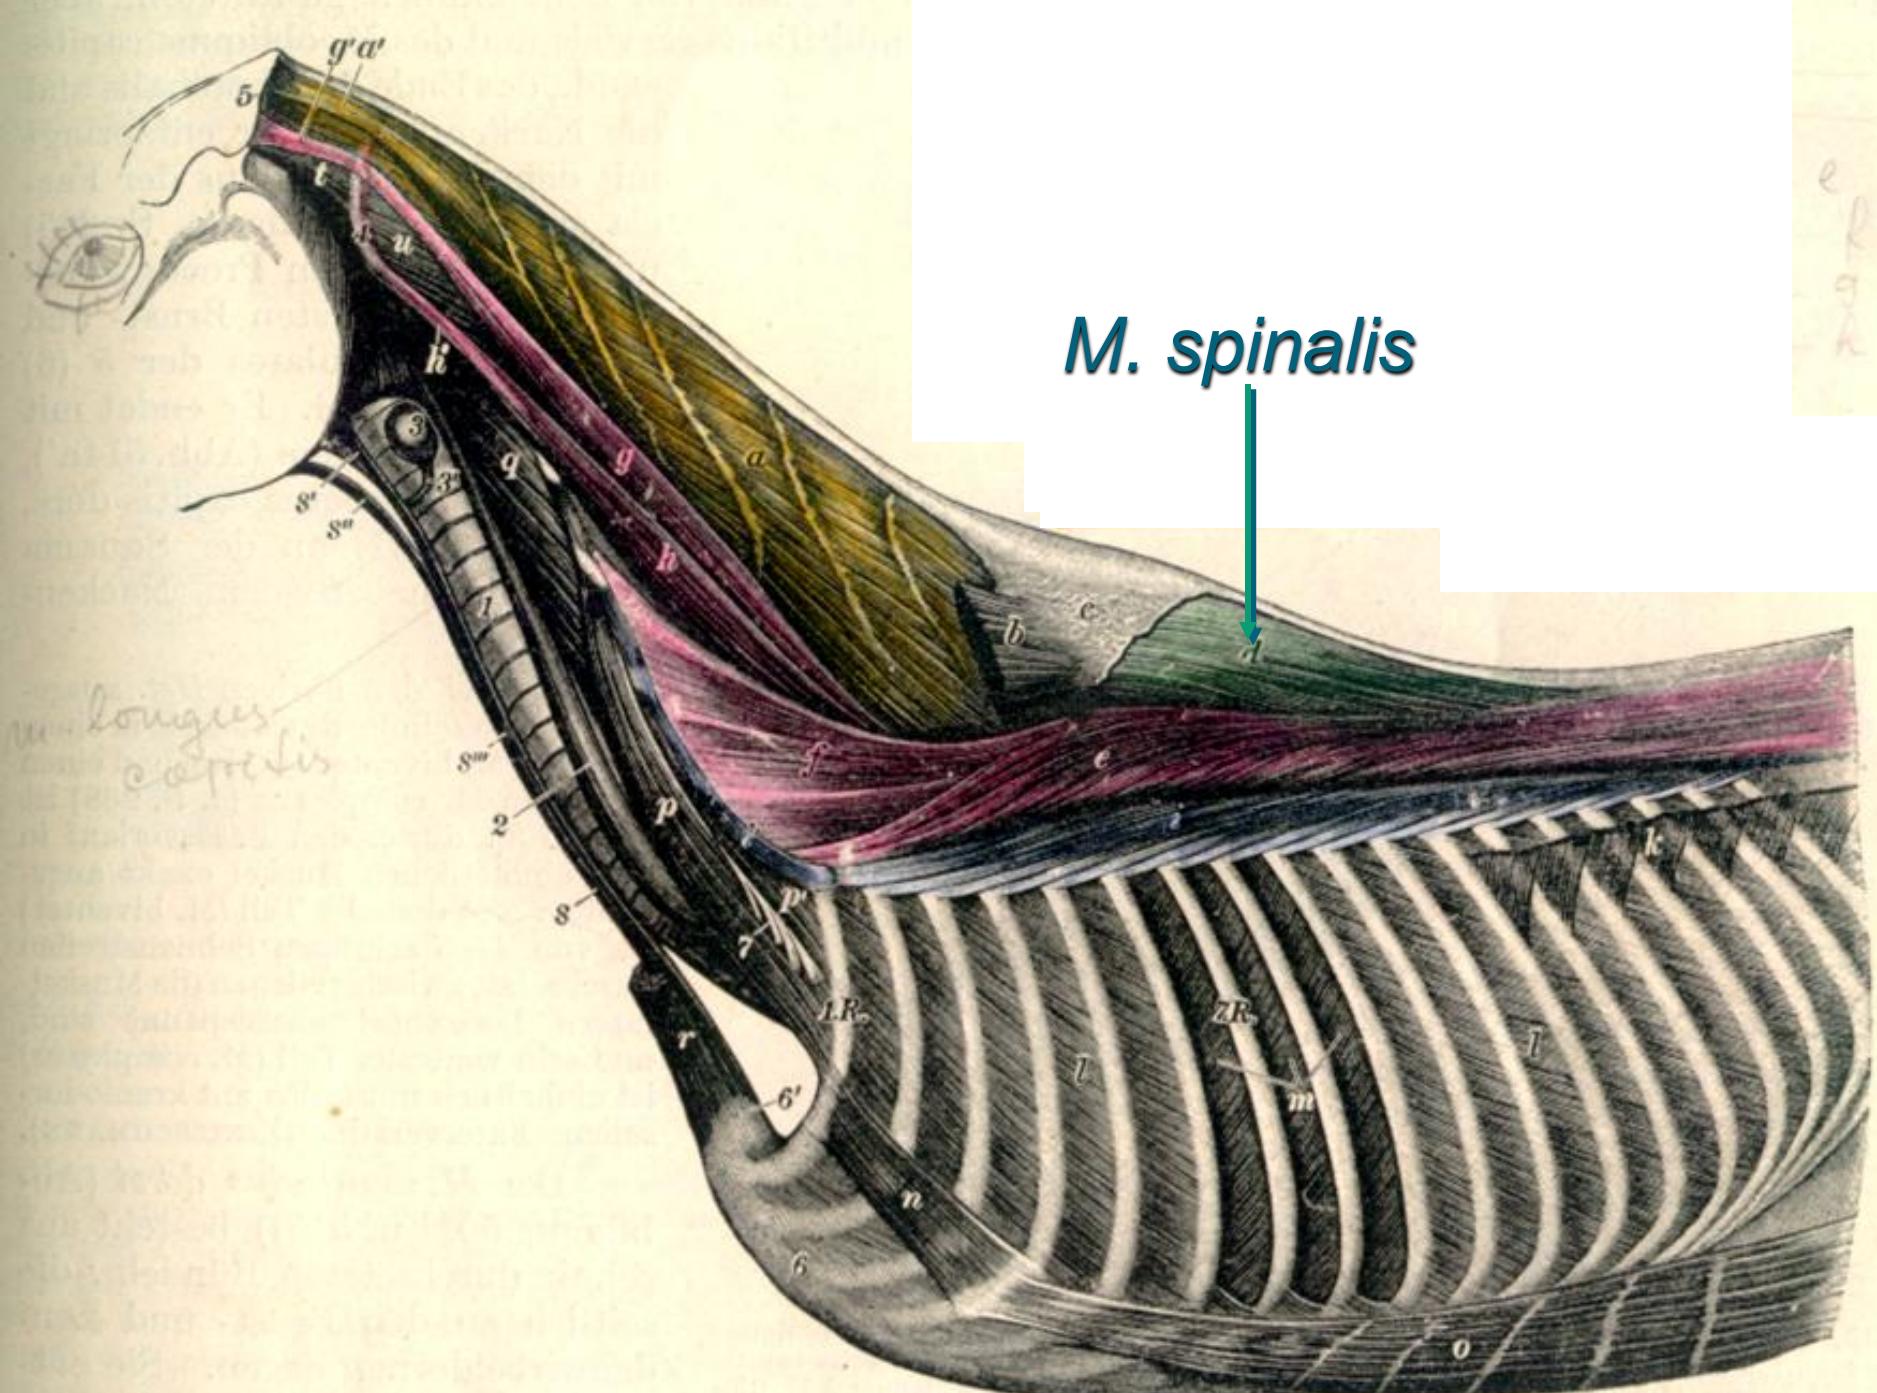

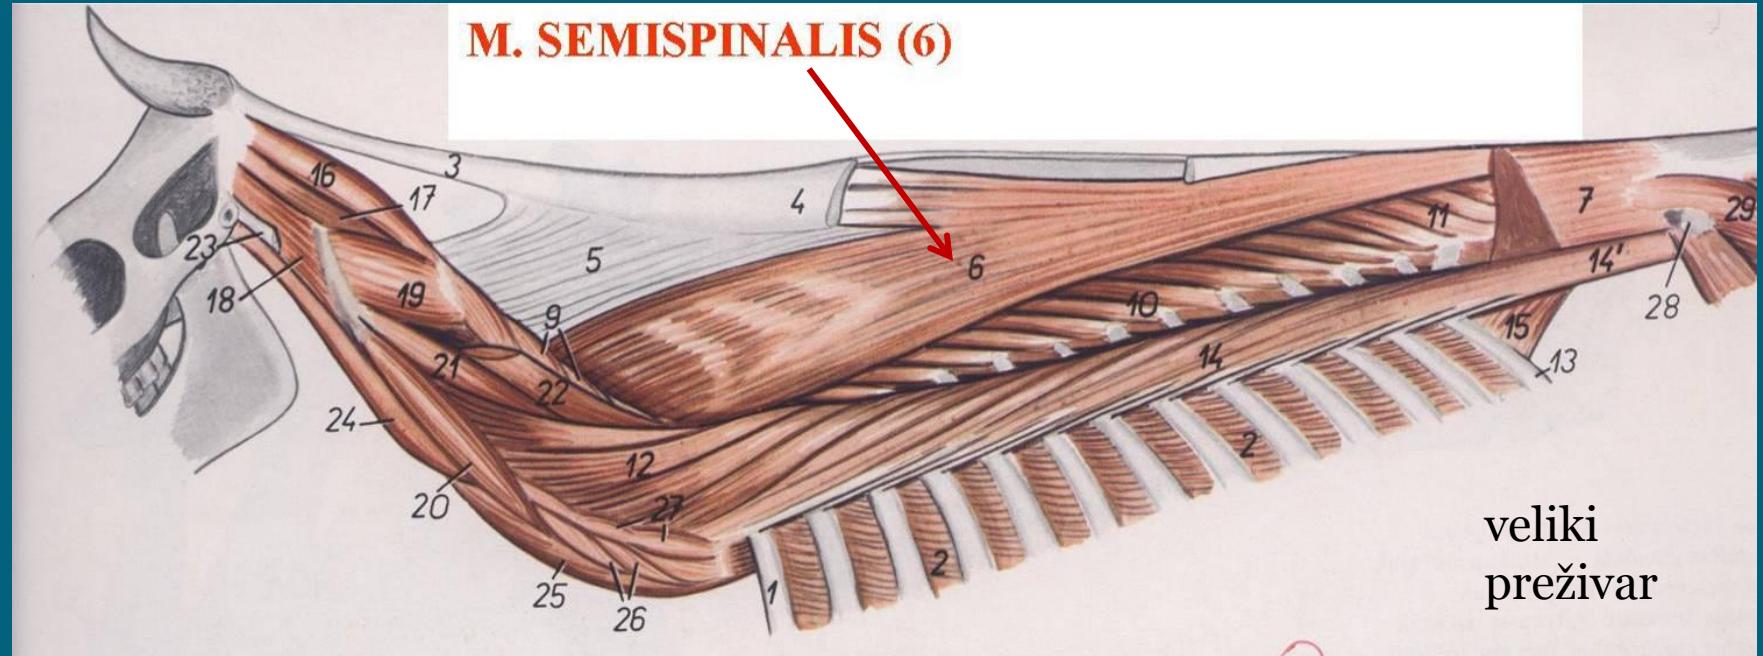

Abb. 514. Linker Pectoralbereich des Delphinus delphis mit dem M. spinalis. (G. H. Müller, H. G. von Möller, 1875, Taf. 57, Abb. 1.)

Kod preživara i pasa tesno je spojen sa M. semispinalisom pa se naziva:

M. spinalis et semispinalis thoracis et cervicis

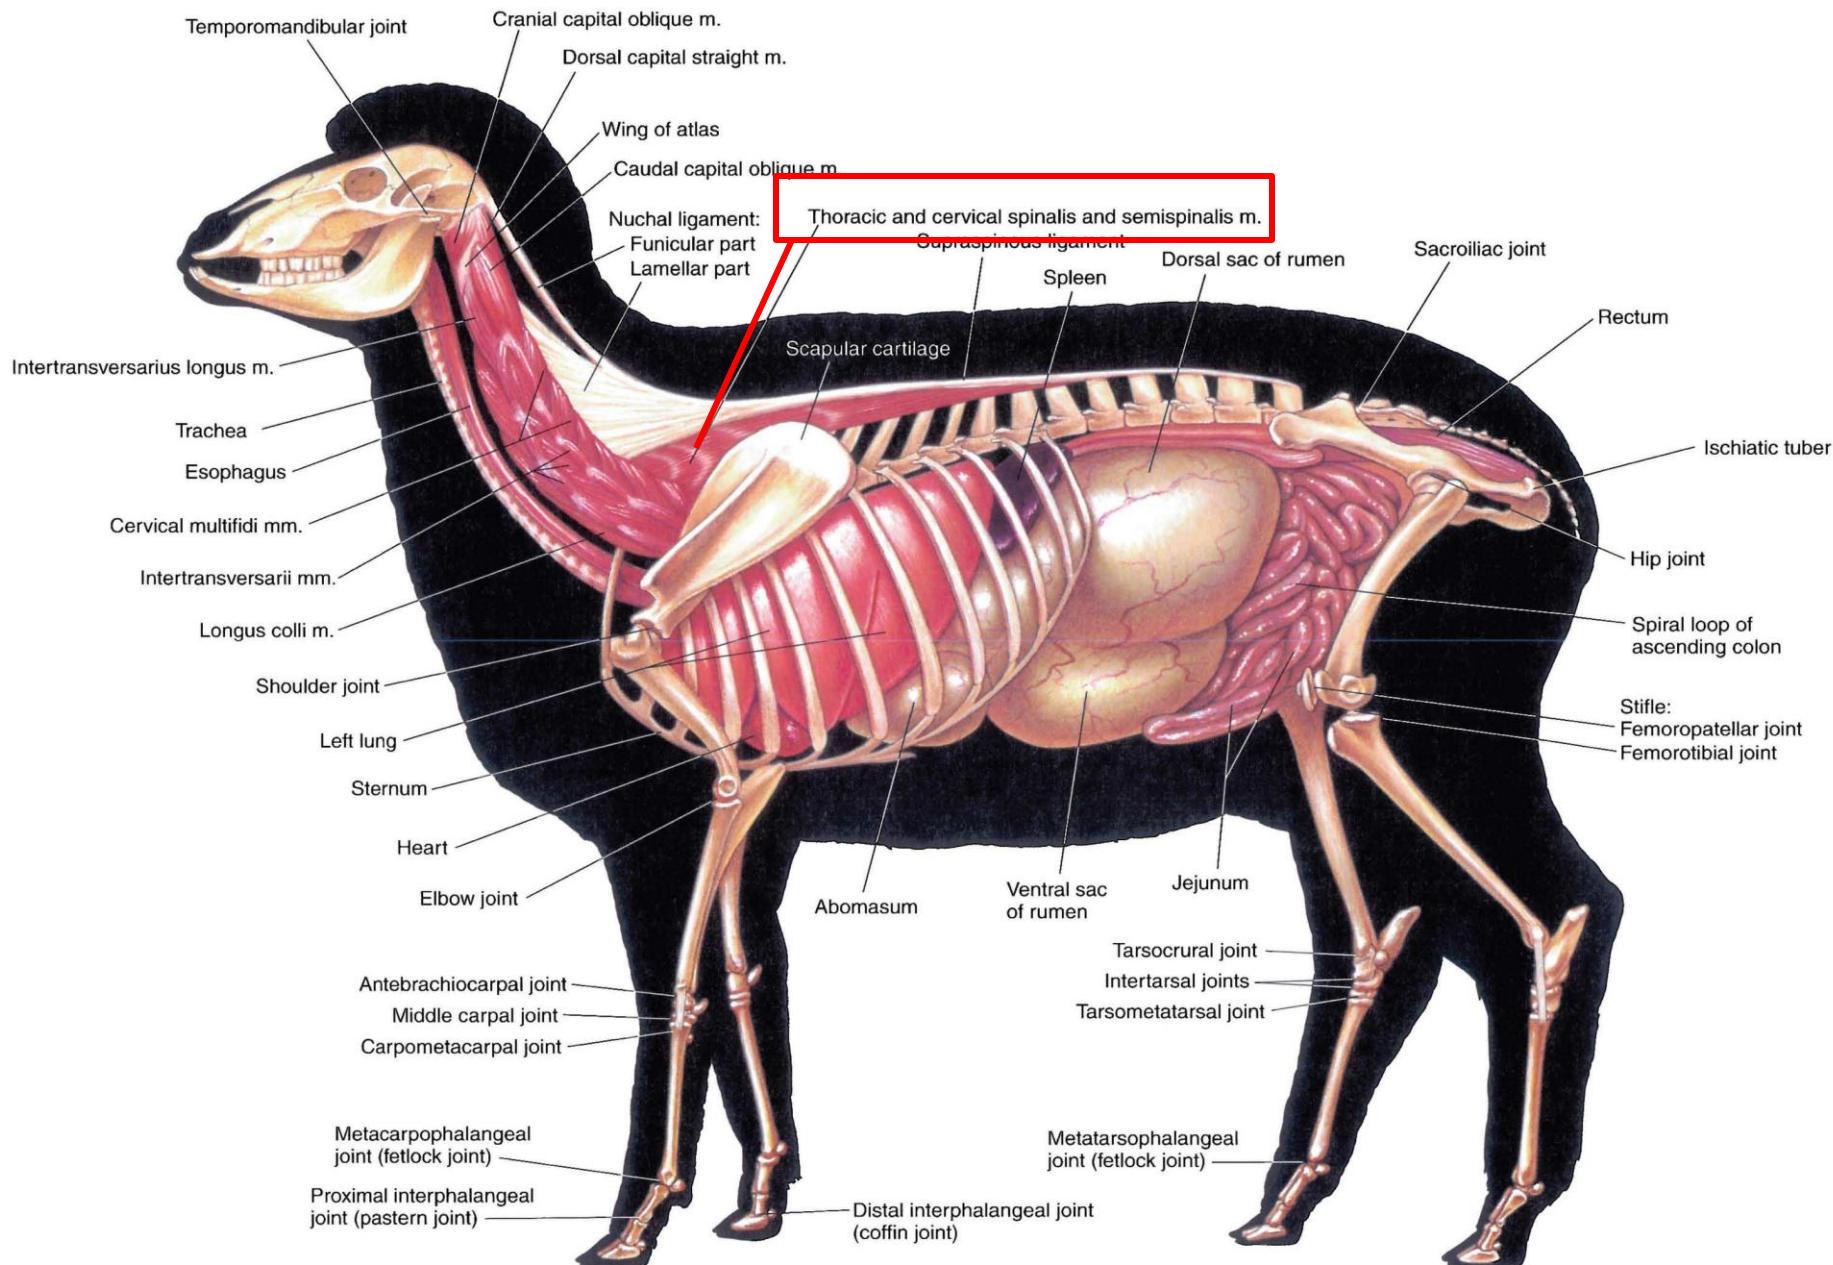

PLATE 3.8 Deep cervical muscles, *in situ* viscera, skeleton, and major joints of the ewe. Left lateral view. m = muscle

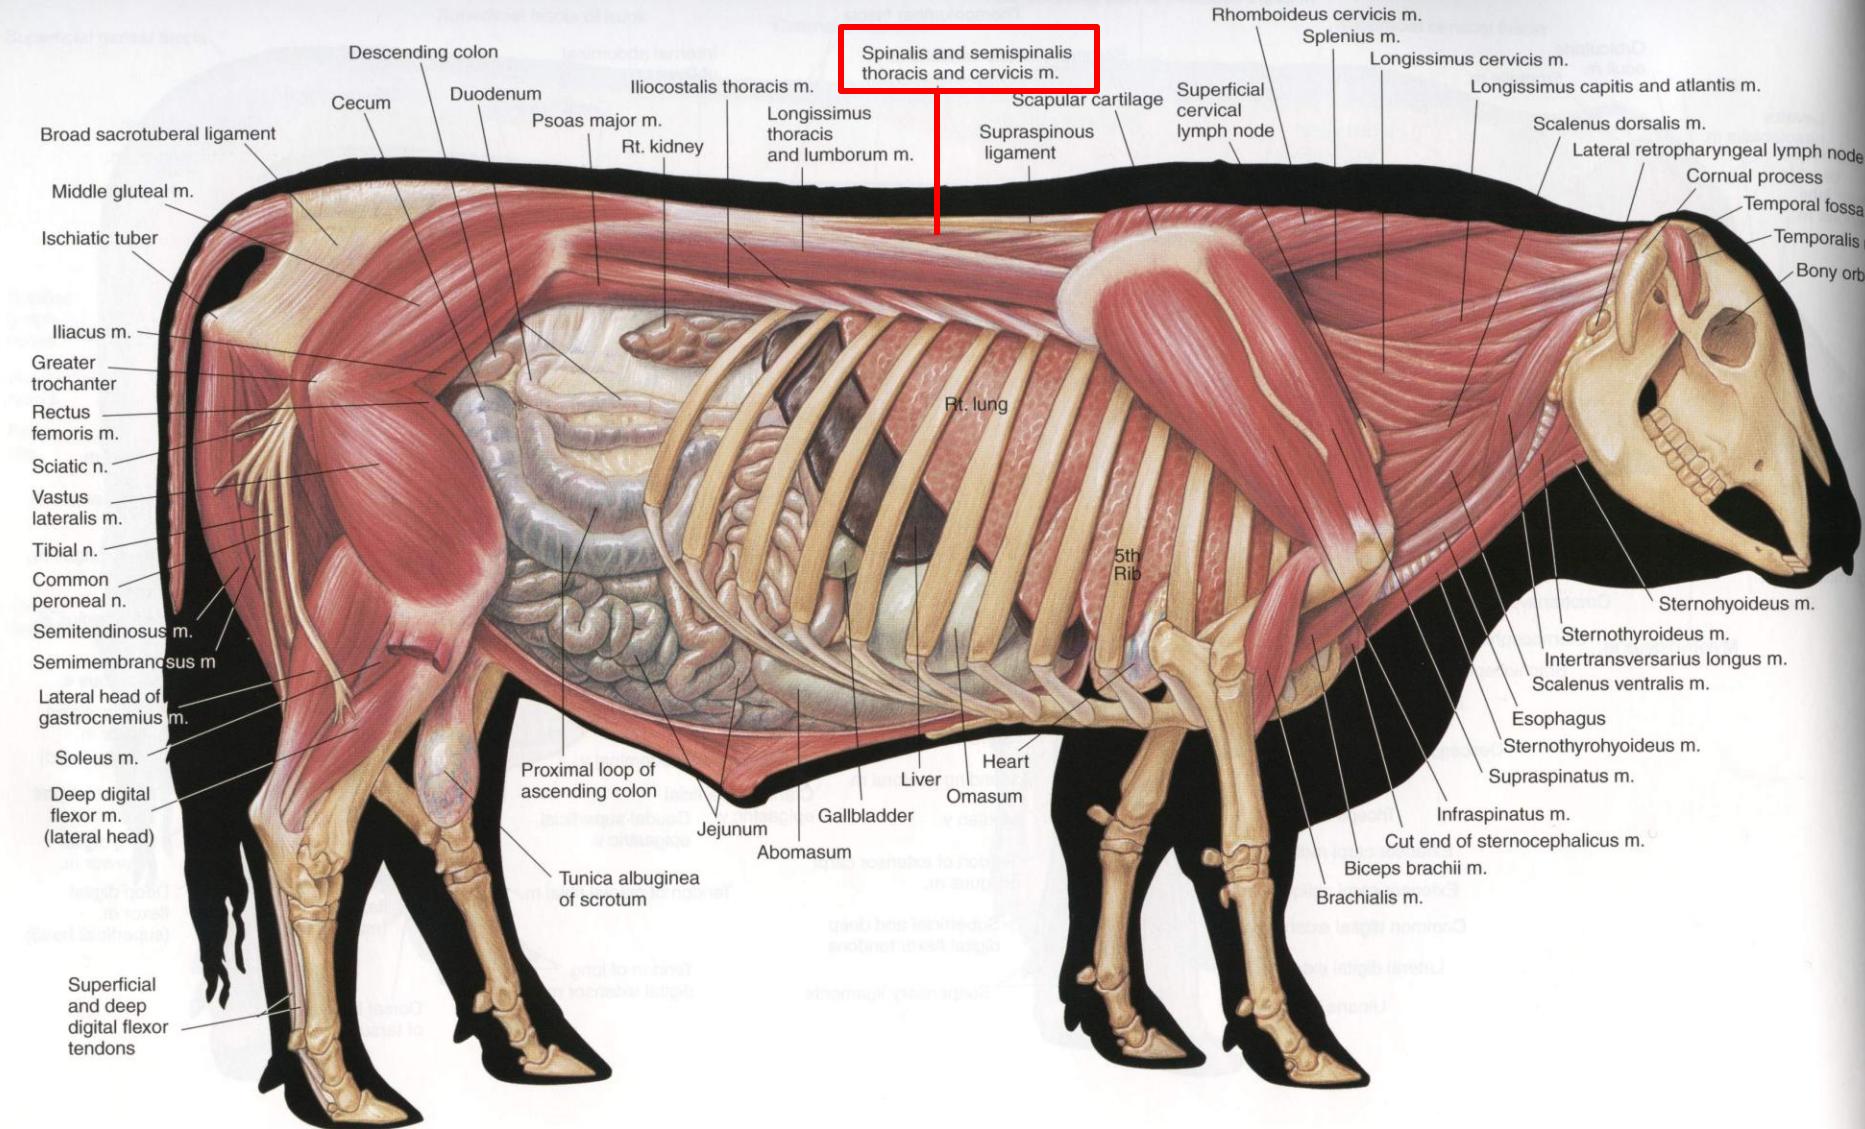

PLATE 2.7 Deep cervical muscles and *in situ* viscera of the bull. Greater omentum removed. Right lateral view. m = muscle, n = nerve

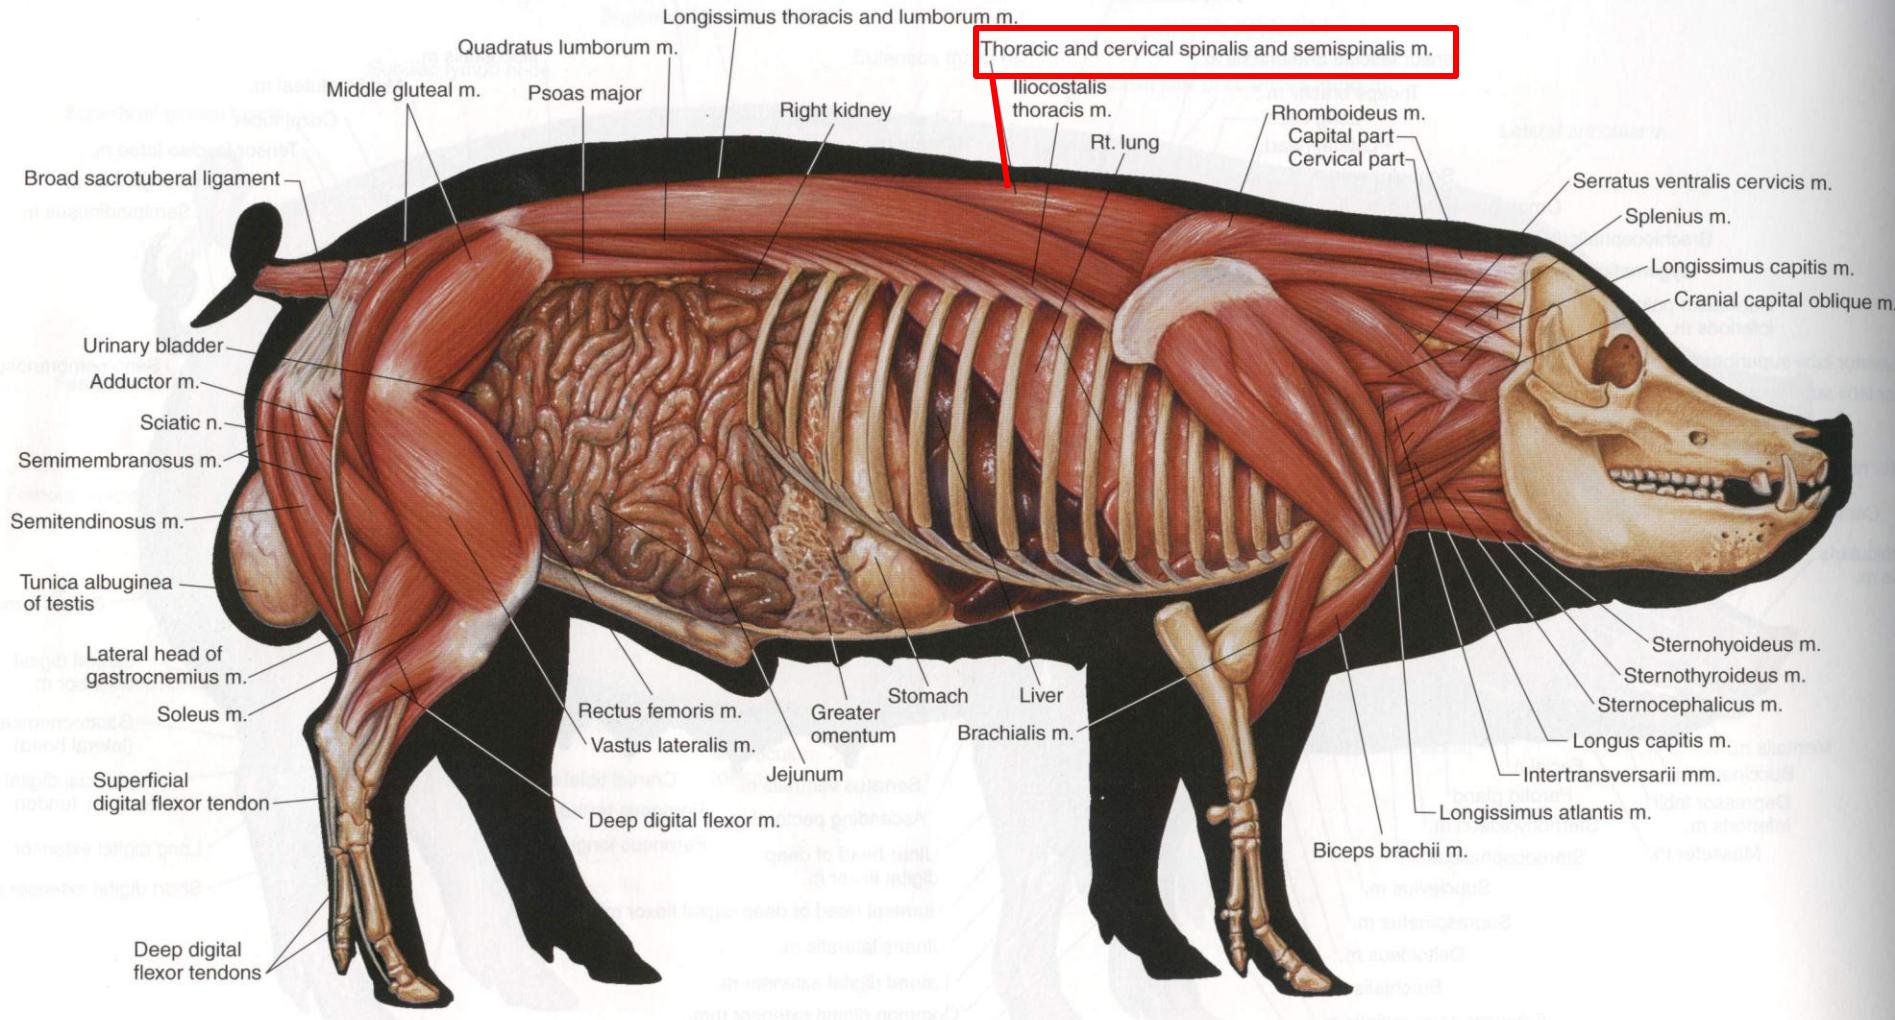

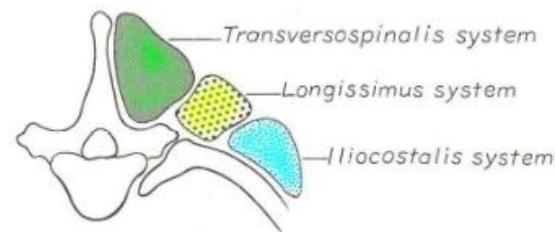

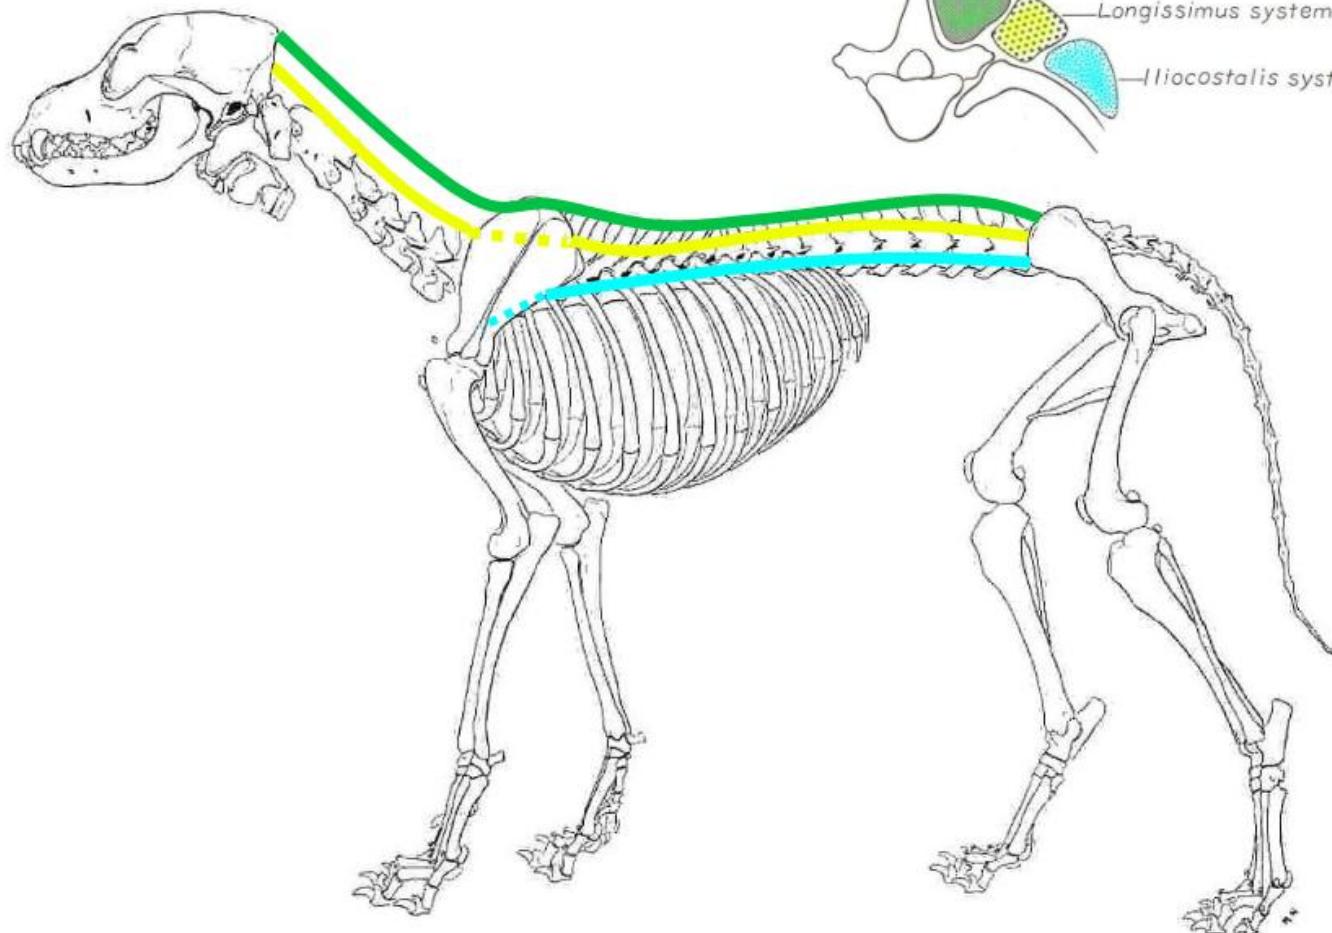

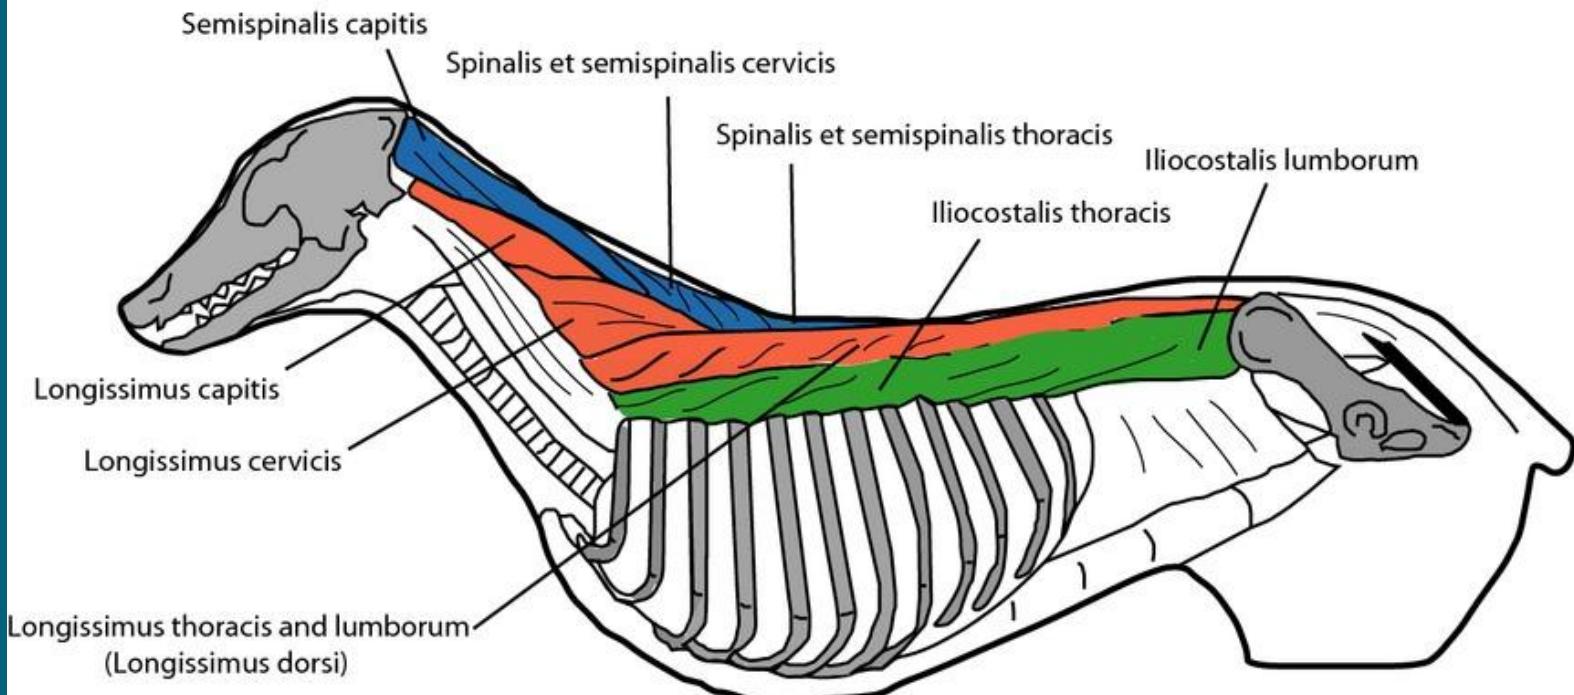

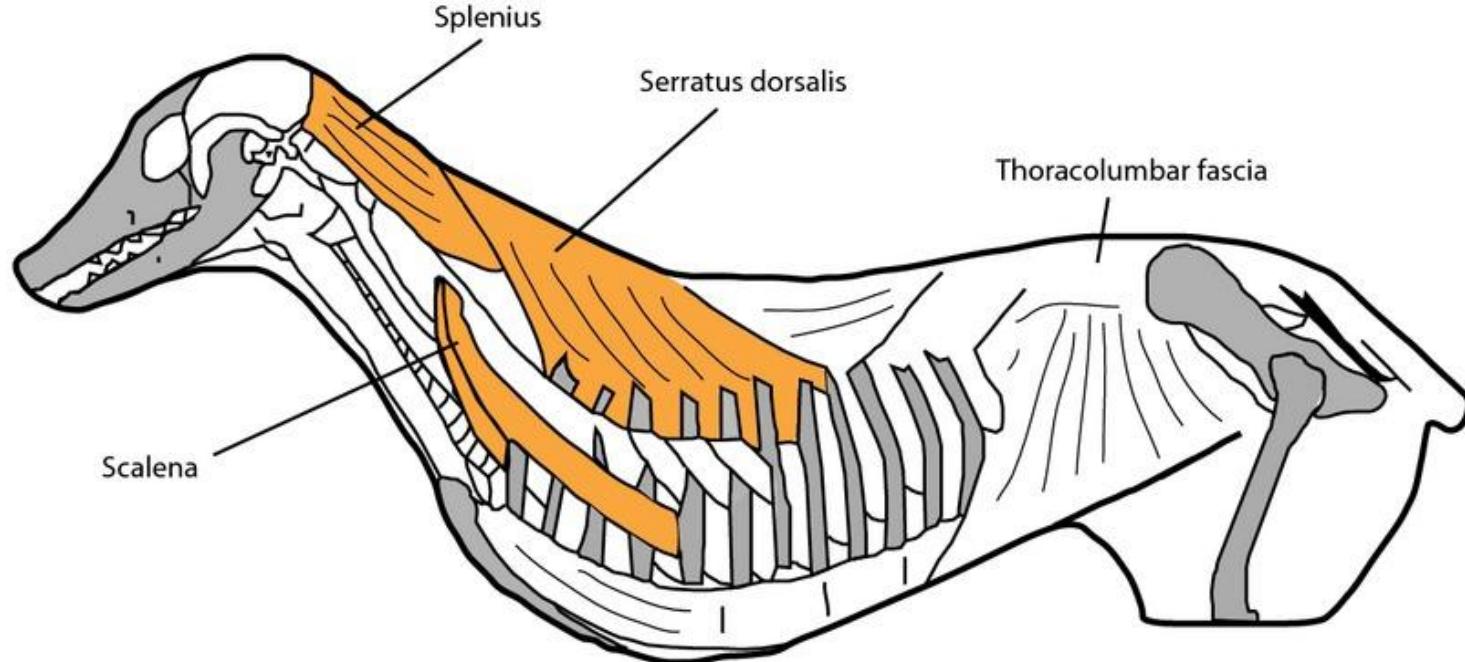

PLATE 6.7 Deep muscles and *in situ* viscera of the boar.
Right lateral view. m = muscle, n = nerve

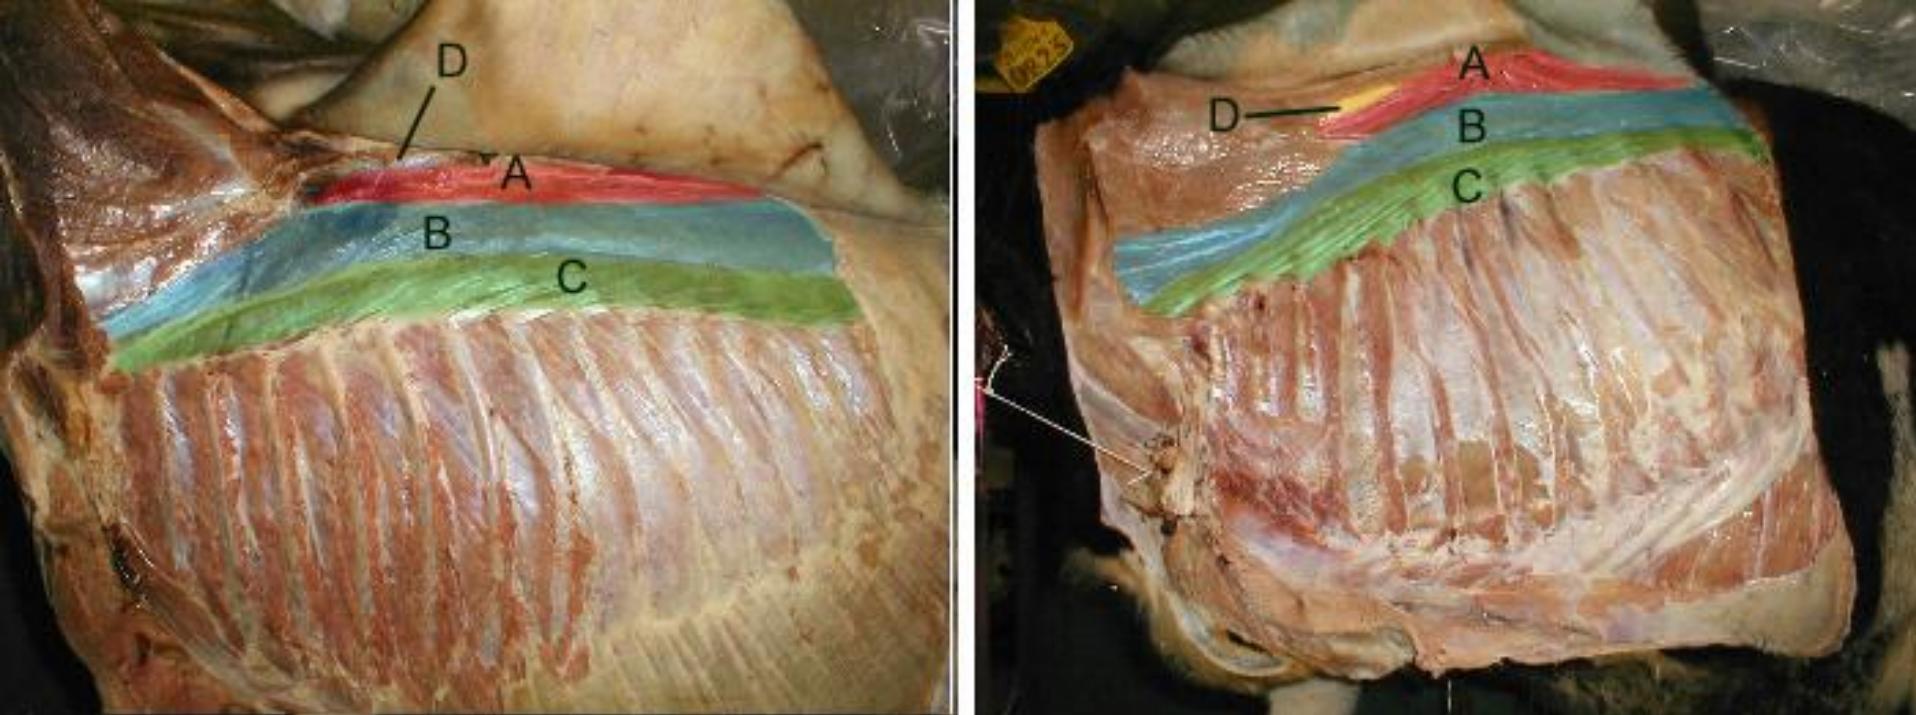

Figure 3 - Epaxial muscles (Horse.....Ox)

- A - Spinalis & semispinalis
- B - Longissimus thoracis
- C - Iliocostalis thoracis
- D - Nuchal ligament

Epaxial muscles of the dog

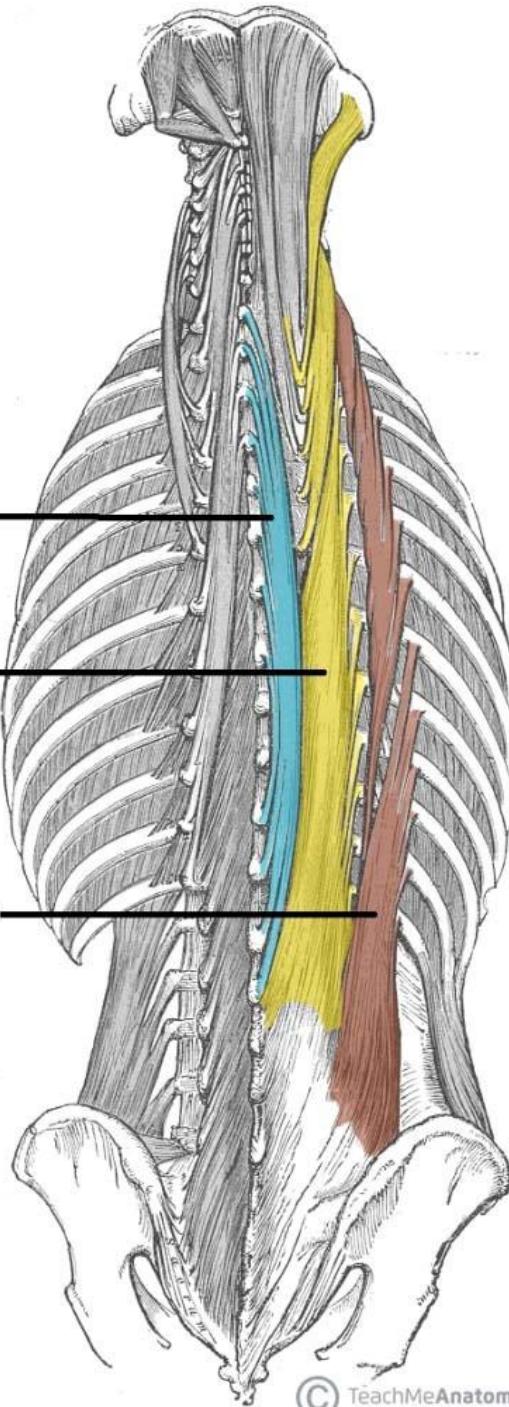

- A - Spinalis & semispinalis
- B - Longissimus thoracis
- C - Iliocostalis thoracis

Spinalis
(thoracic only)

Longissimus

Iliocostalis

ČOVEK

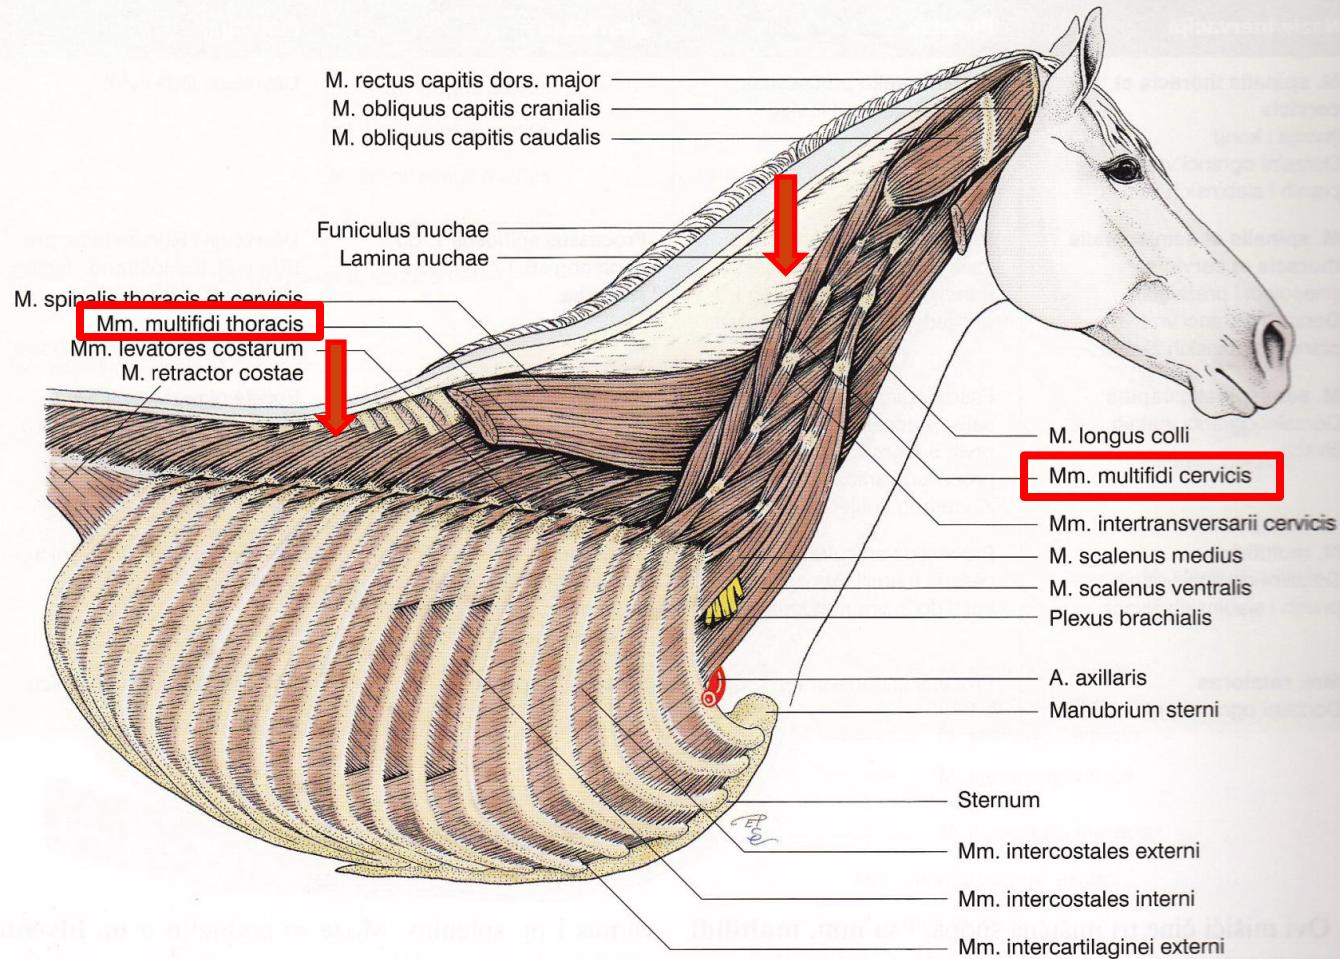

5. *Mm. multifidi*

Mm. multifidi

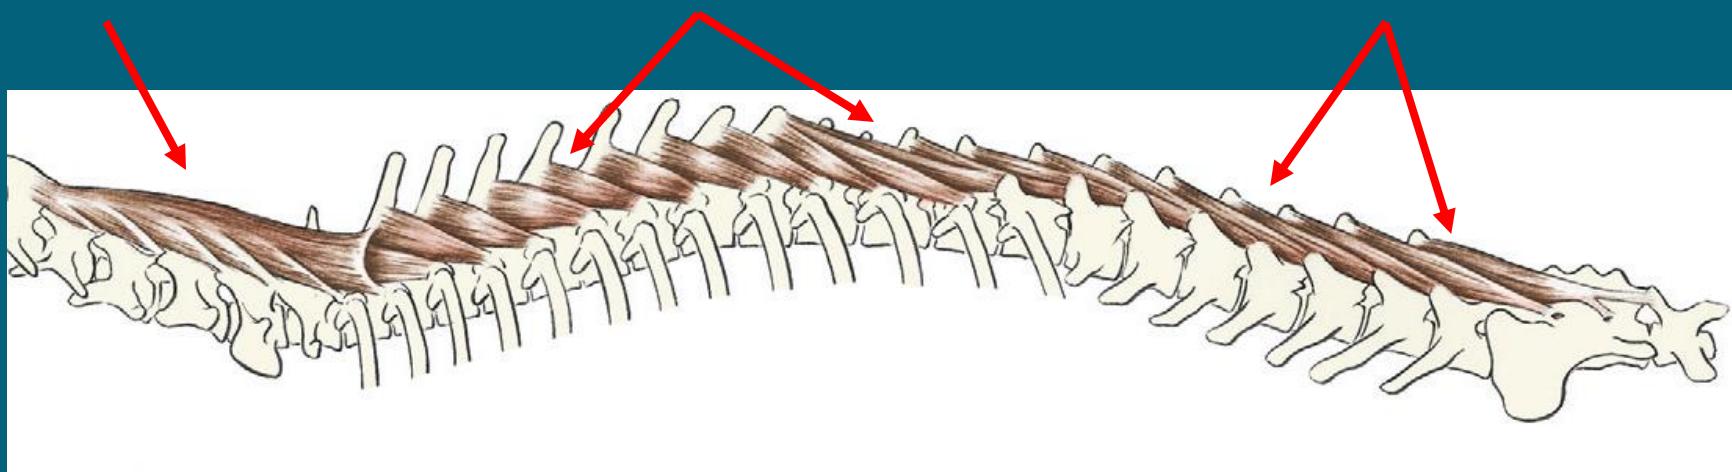

- duž kičmenog stuba: vratni, leđni i slabinski
- najdublji mišići, položeni uz trnaste izdanke pršljenova
pravac pružanja: kraniodorzalan
jednim krajem se prihvata za zglobni i transverzalni izdanak
prelazi kranijalno preko 2 - 6 pršljenova
drugim krajem se prihvata za trnasti izdanak
